# Introduction

The **EvoPICV** Pressure Independent Control Valve “PICV” is a combined adjustable constant flow limiter and full stroke, full authority equal percentage temperature control valve.

The **EvoPICV** is suitable for use in variable and constant temperature systems and may be used as constant flow limiter in constant volume systems (without an actuator head) or as a true PICV in variable volume systems.

## Operating principle

**EvoPICV** valve is made by three main parts:

1. differential pressure regulator
2. regulating valve for flow adjustment
3. flow pre-setting knob

### 1. Differential pressure regulator

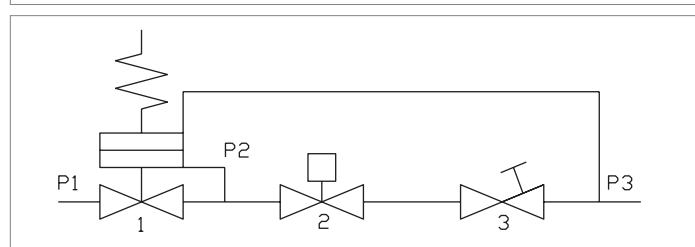

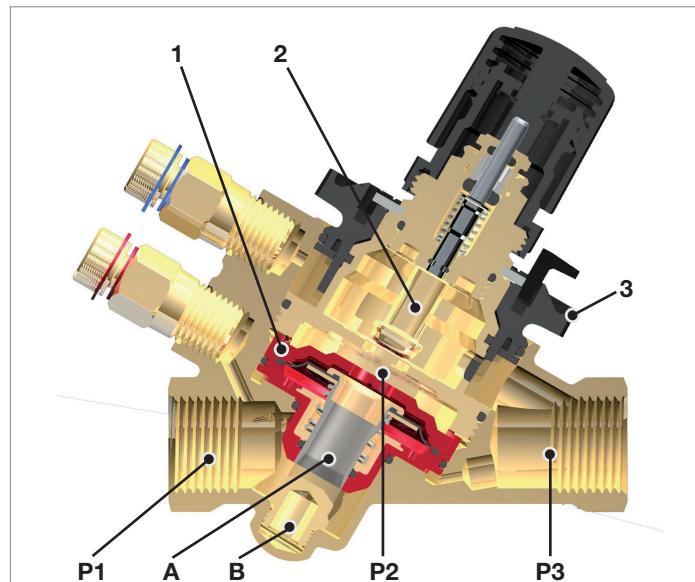

The differential pressure regulator is the heart of the pressure independent control valve. By keeping a constant differential pressure across the valve seats constant flow and full authority temperature control can be achieved.

Incoming pressure P1 is transmitted to the top face of the diaphragm, outgoing pressure P3 is transmitted to the underside of this same diaphragm. A constant effective differential pressure is maintained between P2 and P3. As P1 increases relative to P3 it acts on the diaphragm closing the shutter (A) against a seat (B) thereby lowering the effective differential pressure. As P1 decreases relative to P3 the diaphragm acts to open the shutter (A) from the seat (B) thus increasing the effective differential pressure. The diaphragm acts against a spring in order to balance the pressure control and stop the diaphragm oscillating.

### 2. Regulation valve

Water flow through a valve varies as a function of the area of passage and the pressure differential across that valve. Due to the incorporation of the differential pressure regulator the differential pressure across the valve seats P2 – P3 is constant meaning that flow is now only a function of area of passage.

Setting any flow rate value and maintaining it stable is also possible. The regulation valve presents an equal percentage characteristic.

Functional schematic

### 3. Adjustment knob

The maximum value of the flow can be preset, choking the outlet section of the control valve, using the graduated adjustment knob.

The percentage value, indicated on the scale, matches the maximum flow rate percentage. This value can be changed turning the adjustment knob until it reaches the selected position (matching the percentage indicated on the scale). A locking mechanism avoids the valve set values from being changed inadvertently.

## Advantages and user-friendliness

### 1. Advantages

- **EvoPICV** is a full authority temperature control valve. This means that each individual terminal receives on the flow required even in part load conditions.
- The regulator corrects any differential pressure variation. This leads to a considerable reduction in temperature variations and adjustment movements and to the extension of the life of the moving devices connected to it.
- **EvoPICV** valves offer a remarkable adjustment flexibility. They can be accurately set to a specific flow rate value and they allow precise modulating control.
- The valves always guarantee a suitable flow rate thanks to equalpercentage characteristic, therefore avoiding too high energy consumption.
- Since **EvoPICV** valve performs the functions of two valves (balancing and adjustment), the installation costs are considerably reduced.
- The automatic flow rate limitation eliminates system commissioning costs.
- Since commissioning is very easy to perform, design flow rates can be modified at any time and at low costs.
- Since it is not necessary to commission the valve after its installation, the valve can work immediately after it has been assembled, for example, on the floors where works are already finished.

### 2. User-friendliness

In order to adjust the flow rate, just set the selected value using the adjustment knob.

Since flow rate is the only parameter to be considered, choosing the suitable valve is easy and fast.

**EvoPICV** valve maximum adjustment matches the maximum flow rate allowed by the pipe size, on the basis of the values established by international standards.

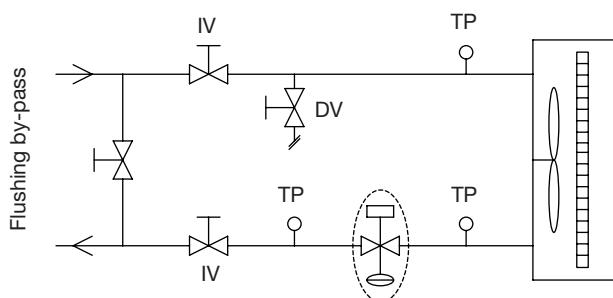

- Setting ratio calculation is not necessary.
- Valve authority calculation is not required.
- Specific devices or knowledge are not necessary.
- Compact design that allows installing the valve also in small spaces such as fan-coils or narrow supply spaces.
- The special adjustment knob allows the flow rate to be set without disassembling the actuator.

## Applications examples

### 1. Systems with variable thermal power

The use of a motorised control valve that automatically limits the flow rate, ensures stable energy supply, independently from the available pressures and, at the same time, thanks to the possibility of controlling the flow rate regulator, it allows effective adjustment of ambient temperature.

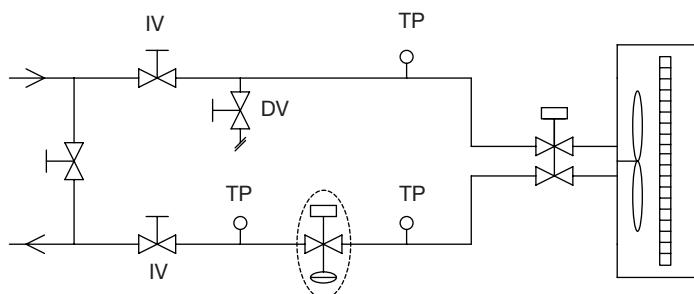

PICV is used as a constant flow limiter and control valve.

### 2. Systems with constant thermal power

If the valve is used to adjust fan-coil flow, it ensures the required flow rate to the equipment and it favours the hydraulic balance of the system. The exchanger always works in the best conditions possible with any differential pressure and the system is split into hydraulically separated areas.

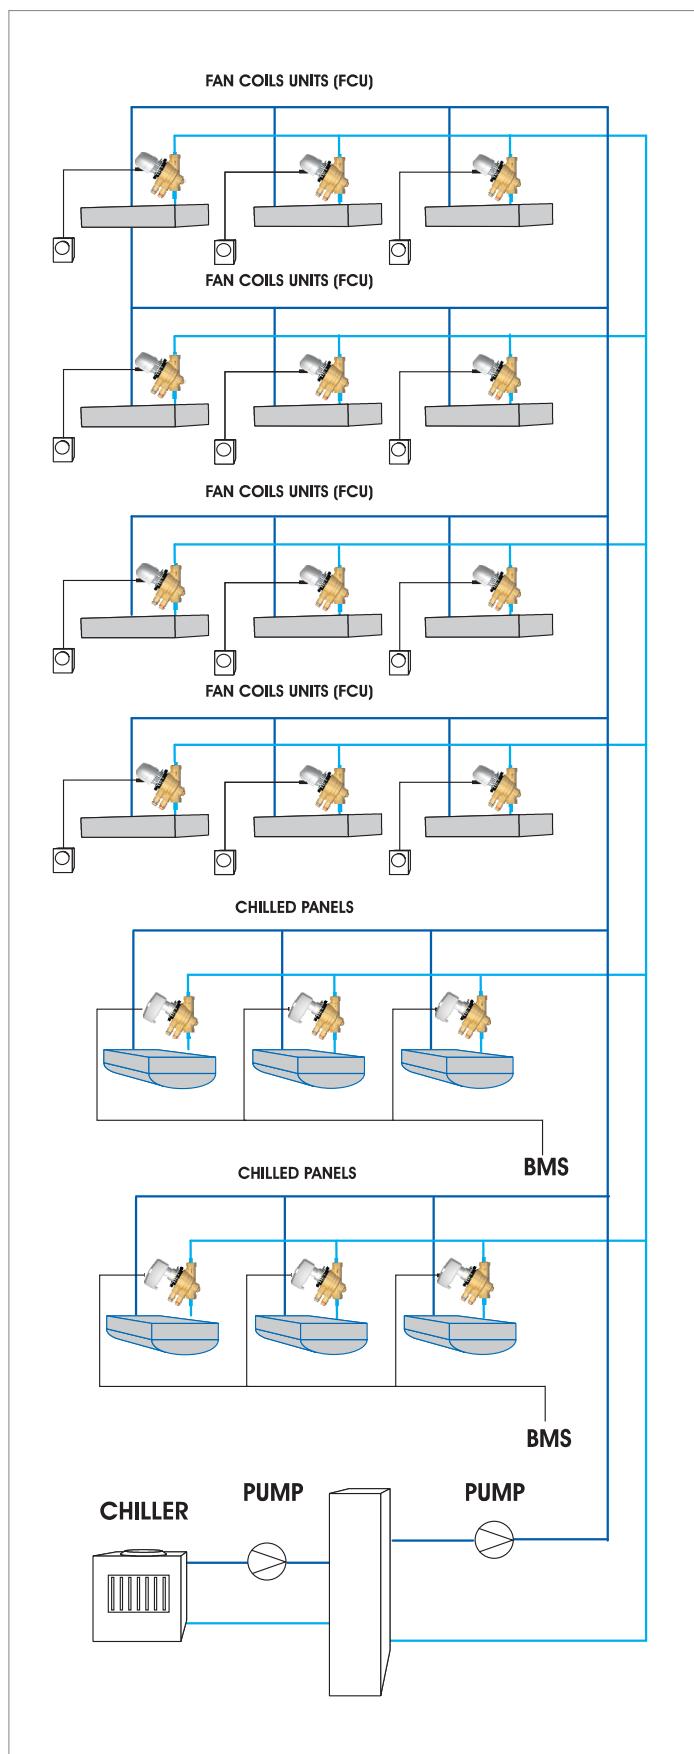

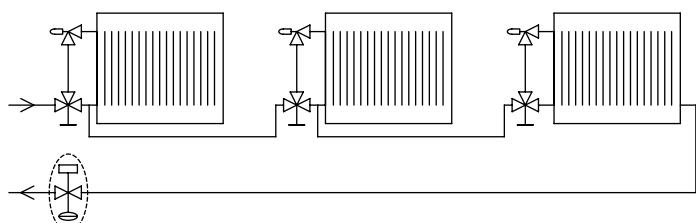

PICV is used as a constant flow limiter.

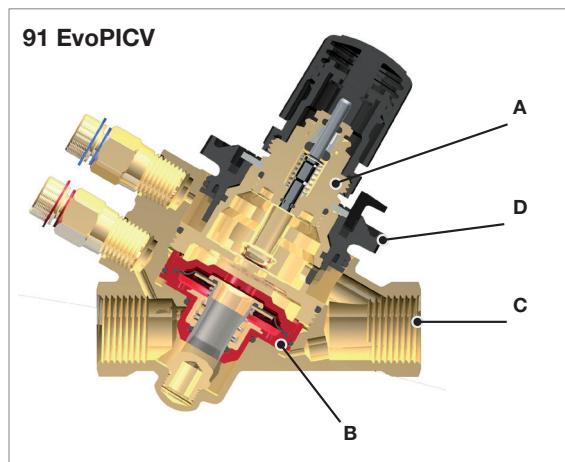

### 3. Single-pipe heating systems

An automatic valve placed on the system return line ensures a stable flow rate on the main branches at any thermostatic valve opening, thus reducing the possible sudden changes due to pressure variations in the system.

PICV is used as a constant flow limiter.

<b>Allowed medium in all PICV range</b>
Water / Water+glycol 30%

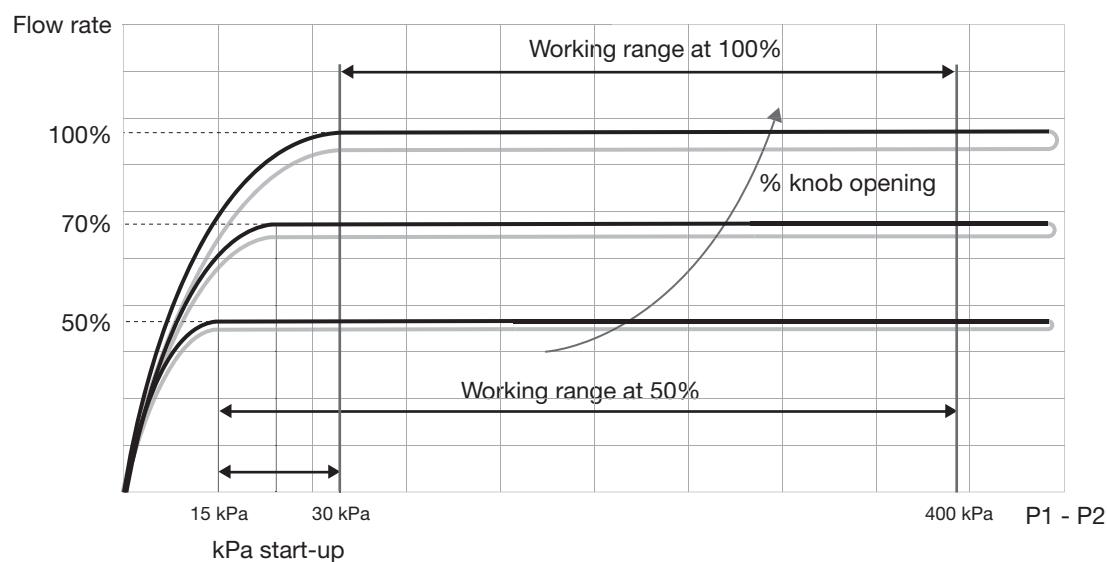

## Dynamic characteristic curves

Using a differential pressure gauge to measure the pressure drop the valve absorbs, allows to check whether the valve is in the operating range (and, therefore, whether the flow is constant) by simply verifying that the measured value  $P_1 - P_2$  is higher than the start-up value.

If the  $\Delta P$  measured value is lower than the start-up value, then the valve works as a fixed orifice valve.

Start-up value varies with flow setting of the valve, as shown by the example below:

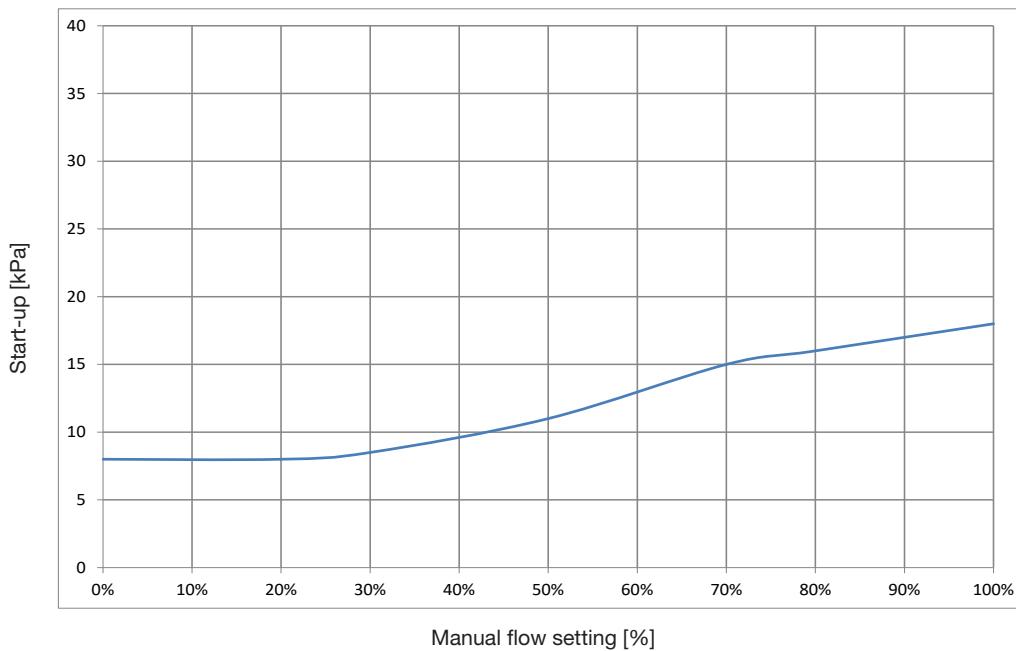

When the valve is set at 100% of nominal (maximum) flow, the curve begins to remain constant at 30 kPa, therefore the working range of the valve is 30 ÷ 400 kPa;

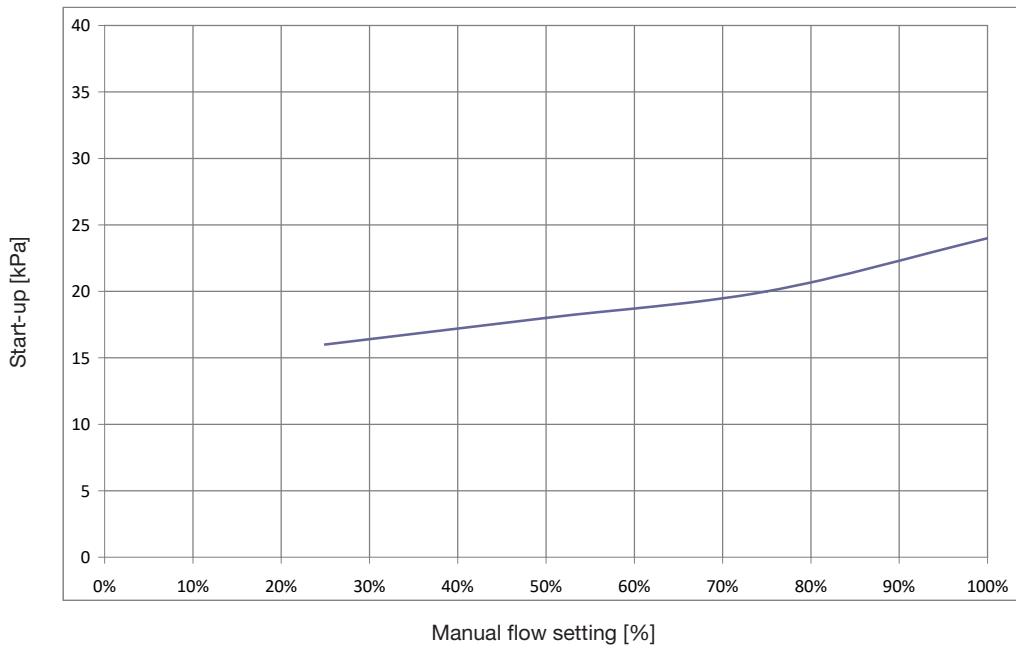

When the valve is set at 50% of nominal flow, the curve begins to remain constant at 15 kPa, therefore the working range of the valve is 15 ÷ 400 kPa.

Over 400 kPa the fluid velocity through the valve is extremely high and cavitation may happen due to extreme turbulence of the flow. Because of these phenomena the valve can get damaged. For energy saving reasons, we suggest to continuously work the valve under 400 kPa.

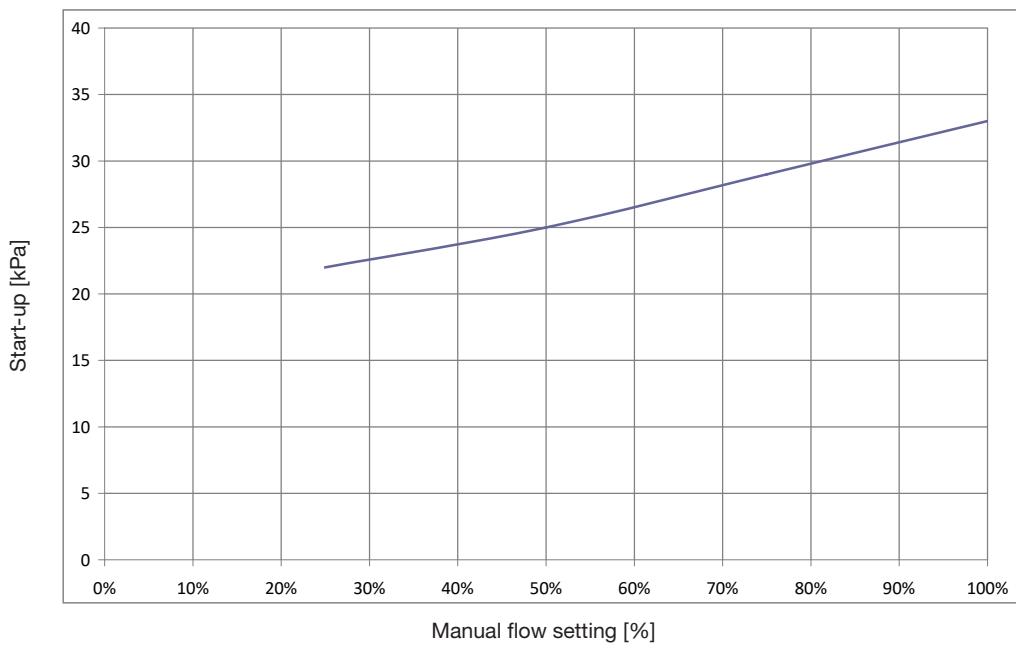

The following charts show how *start-up pressure* changes for each models

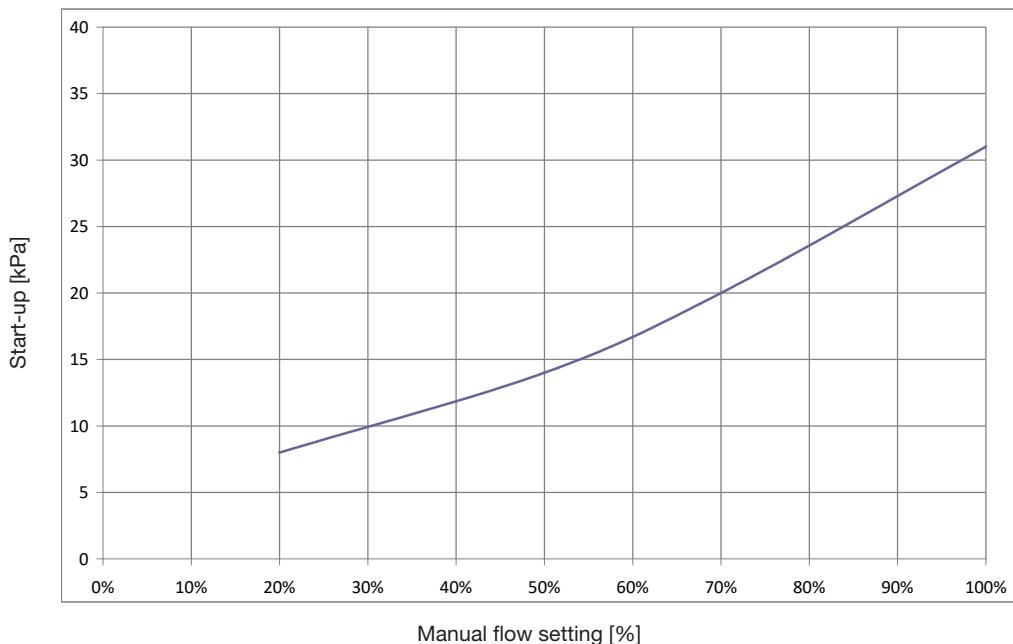

Valve model
91VL 1/2" - 150 l/h
91VL1 1/2" - 150 l/h
91XVL 1/2" - 150 l/h
91XVL/3 1/2" - 150 l/h
91XVL3S 1/2" - 150 l/h
91XVL/2 1/2" - 150 l/h

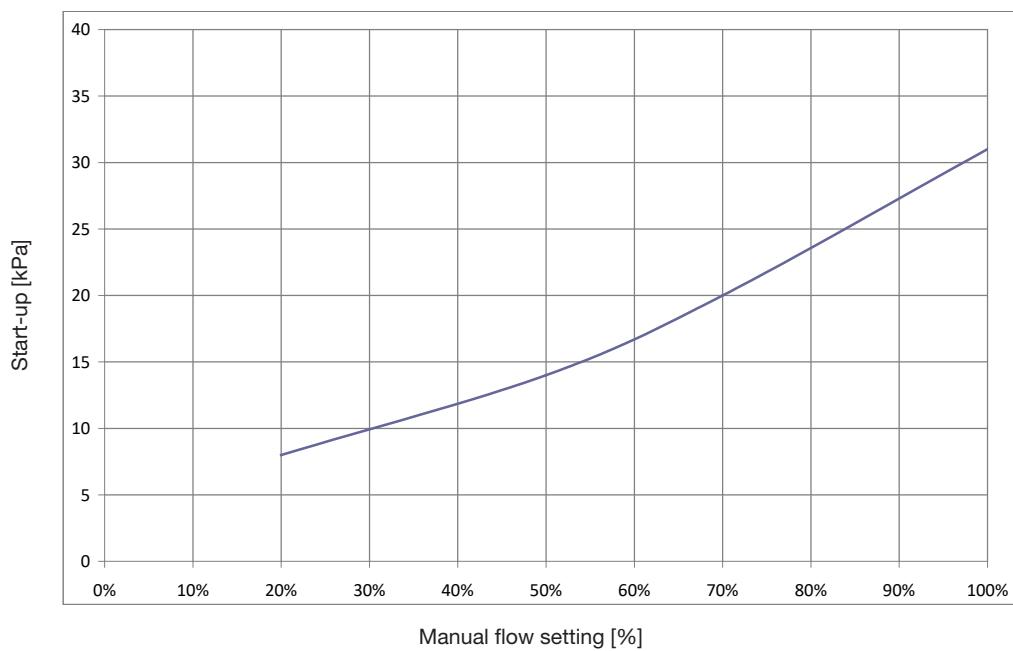

Valve model
91L 1/2" - 600 l/h
91L1 1/2" - 600 l/h

**Flow setting accuracy**

Max flow deviation at different settings over 1 bar differential pressure.

Some models, in the presetting range between 0-30%, might work with a higher deviation.  
Please contact technical department for further information.

## Flow control and characteristic curves

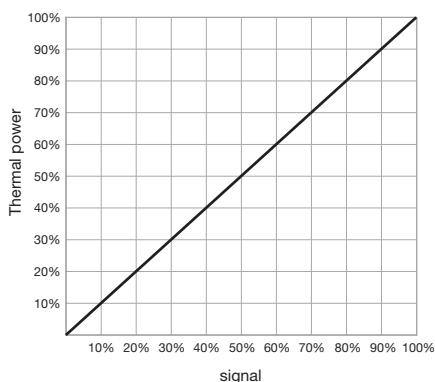

The type of characteristic of the control valve (ON/OFF, linear, equalpercentage) should be chosen according to the heat exchanger and to the type of control to be performed on the system. For ON/OFF control, a valve with ON/OFF curve will be sufficient, while a modulating control requires a linear or equal percentage characteristic.

The following graphs show the optimal characteristic curve for the remote control of a heating / cooling system (A) - considering temperature sensor, controller, actuator, control valve and terminal unit coil -, the typical curve of the heat

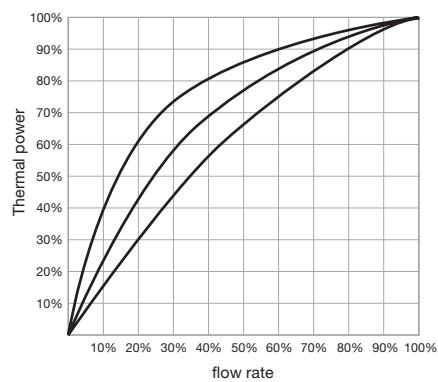

exchangers normally used in thermo-hydraulic systems (B), the typical curves of the control valves of these systems (C) and, finally, the resulting curves (D), obtained joining the curve (B) with the different valve curves (C).

As showed, the curve (D3), obtained combining an equal percentage valve with a heat exchanger, corresponds to the optimal control curve (A). Therefore, equal percentage characteristic is able to prevent overflow and low DeltaT syndrome across the terminal unit. Energy waste is avoided.

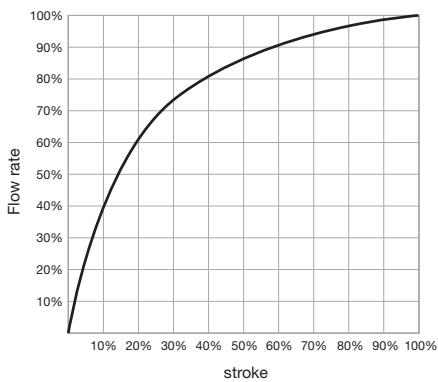

(A) Optimal control characteristic of any heating / cooling system

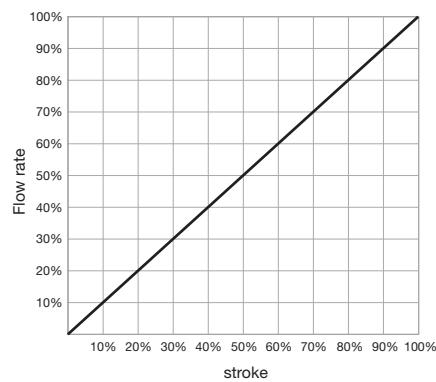

(B) Typical characteristic curve of a generic heat exchanger (thermal output / flow rate)

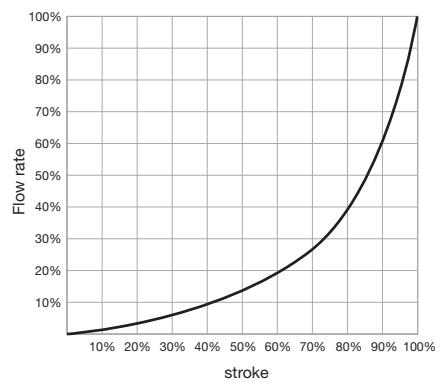

(C1) ON/OFF valve characteristic curve

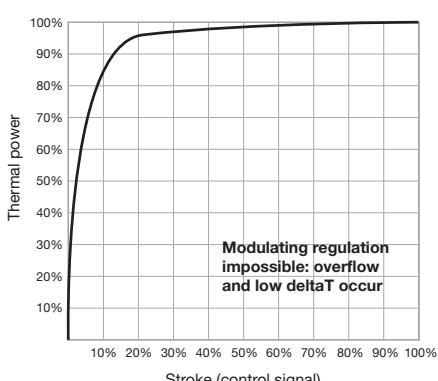

(C2) Linear valve characteristic curve

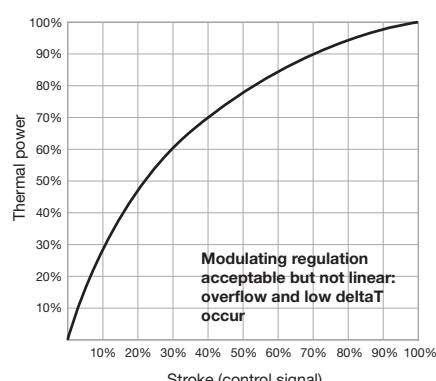

(C3) Equal percentage EvoPICV control valve characteristic curve

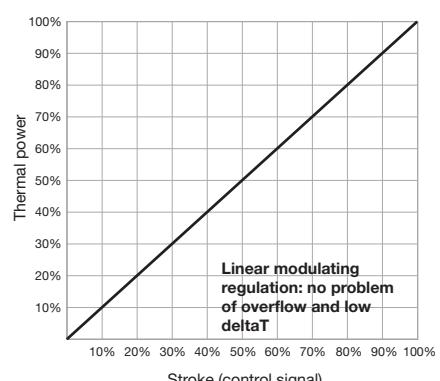

(D1) ON/OFF valve + heat exchanger system resulting graph

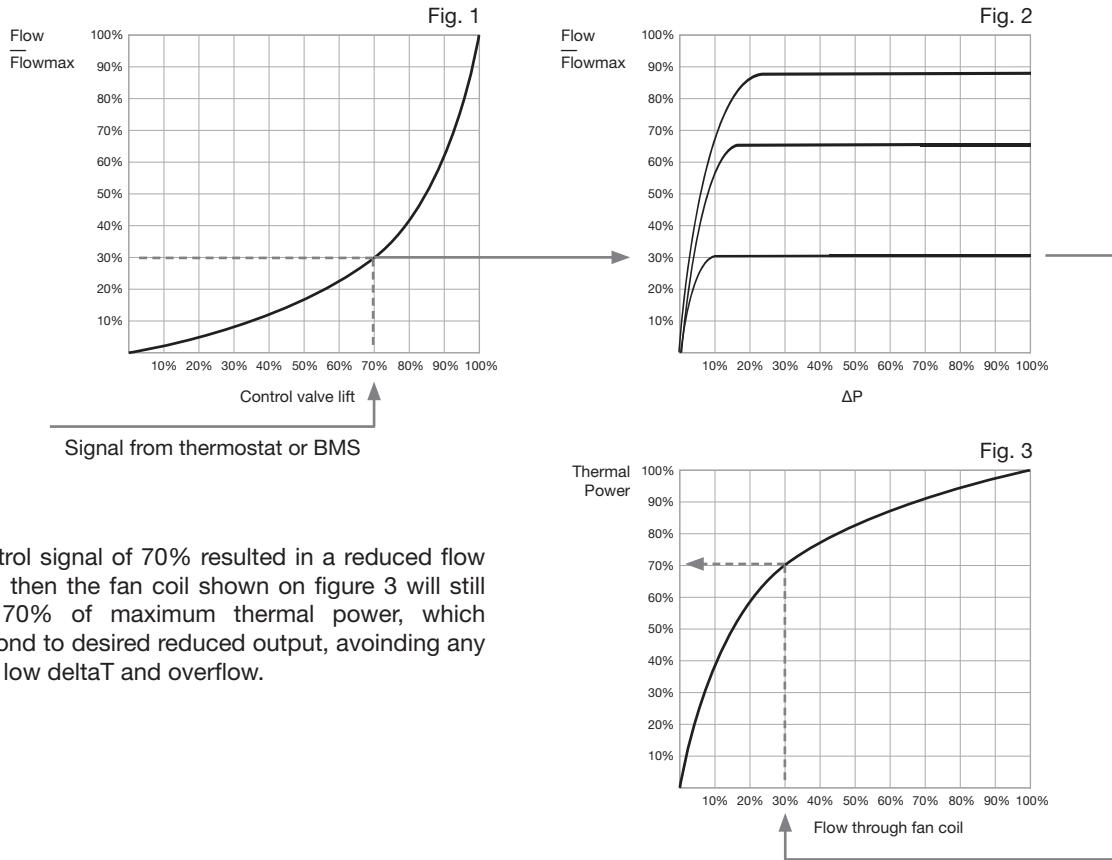

(D2) Linear valve + heat exchanger system resulting graph

(D3) Equal percentage EvoPICV valve + heat exchanger system resulting graph

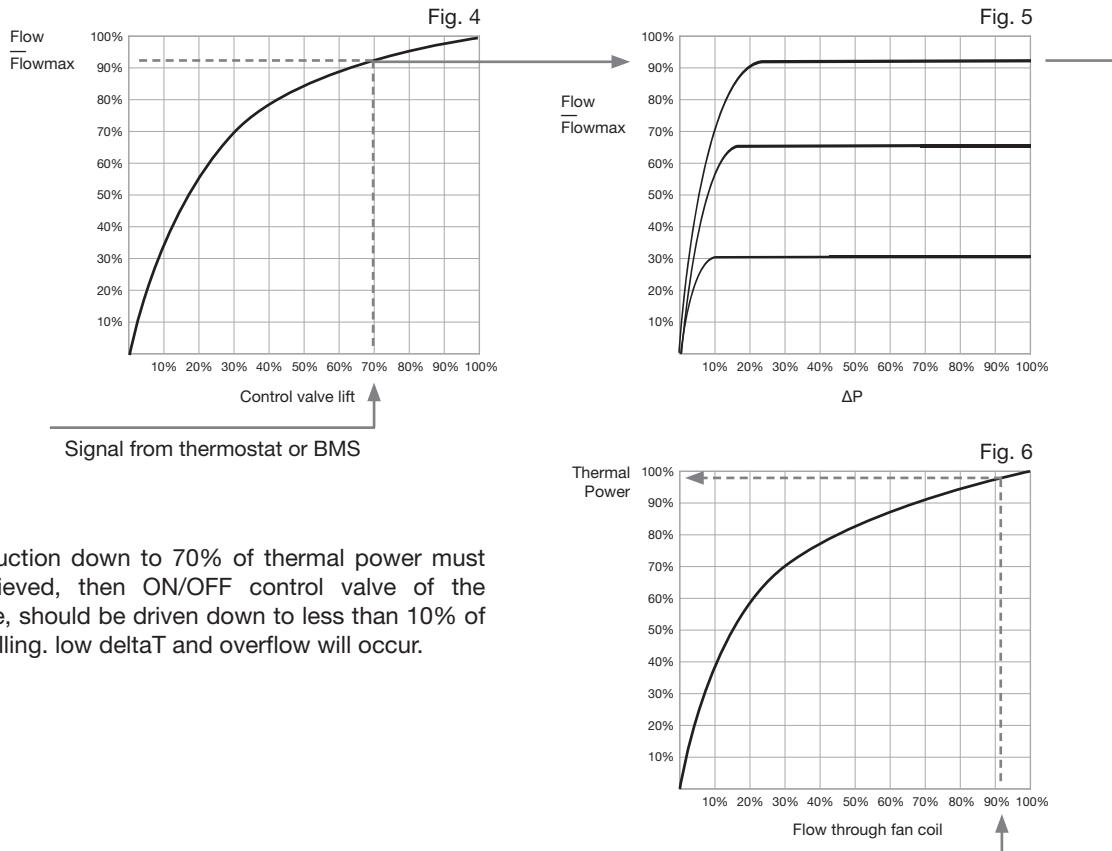

As an example, a control valve with equal percentage characteristic can be considered in figure 1. Should a reduction down to 70% of thermal power be required, control signal will simply drive the valve actuator to 70% of its stroke, thus reducing the valve flow rate down to 30%, see figure 2.

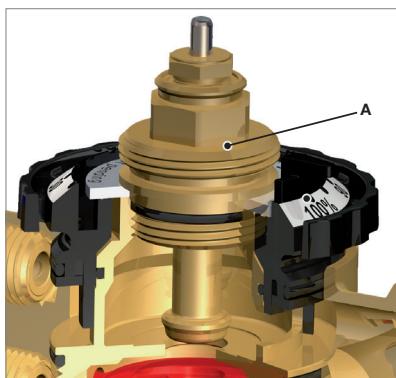

If a control signal of 70% resulted in a reduced flow of 30%, then the fan coil shown on figure 3 will still deliver 70% of maximum thermal power, which correspond to desired reduced output, avoiding any issue of low  $\Delta T$  and overflow.

On the other hand, if we consider to use an ON/OFF valve, as shown in figure 4, when driving the actuator down to 70%, valve flow will be reduced down to 92%, as shown in figure 5; If the same fan coil is used, resulting thermal power can be immediately calculated, as shown in figure 6 and it equals to 98%, which correspond to almost no reduction of thermal power.

If a reduction down to 70% of thermal power must be achieved, then ON/OFF control valve of the example, should be driven down to less than 10% of its travelling. low  $\Delta T$  and overflow will occur.

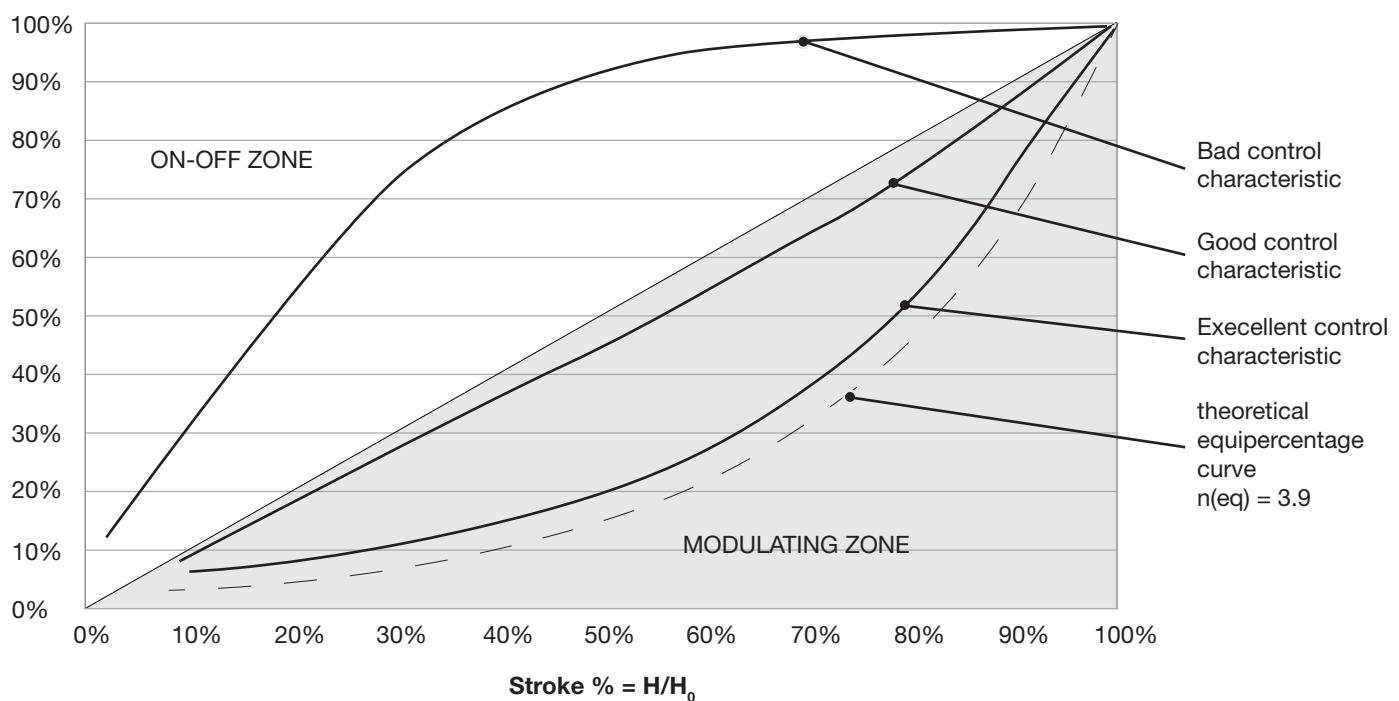

## Control characteristic curve

Operating on the position of the regulating valve control stem A will modify the valve Kv, hence the flow rate. The relation between Kv and stroke is shown in the graph below.

Typical control valve characteristic curves

$$K_v \% = K_v / K_{v\max}$$

Combining the **EvoPICV** valve characteristic with heat exchanger results in a linear control system. Control curve characteristic may change according to valve version.

$H$  = current lift (opening) of the control valve;  $H$  varies from 0 to  $H_0$

$H_0$  = maximum lift of the control valve;

$K_v$  = valve flow factor at lift =  $H$

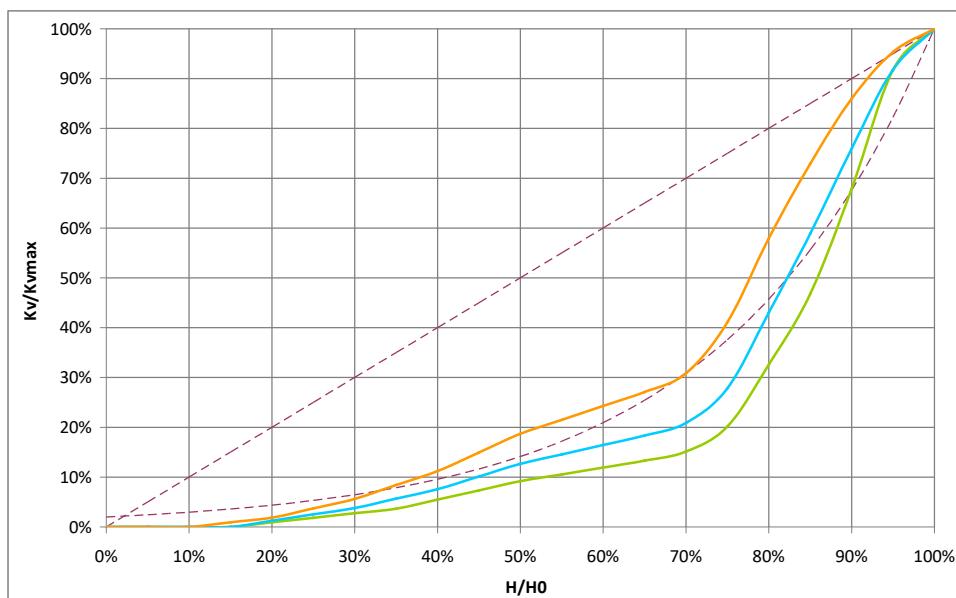

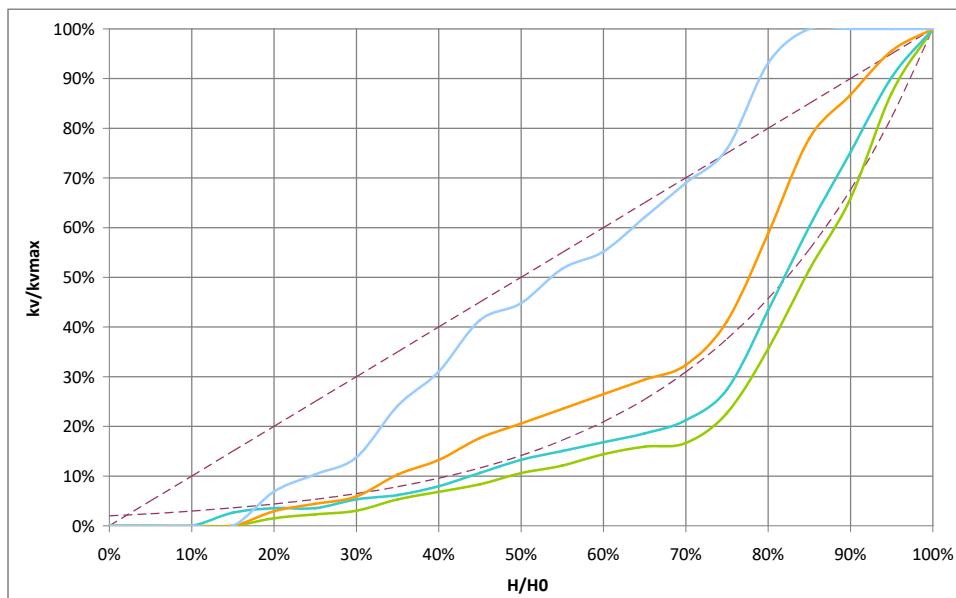

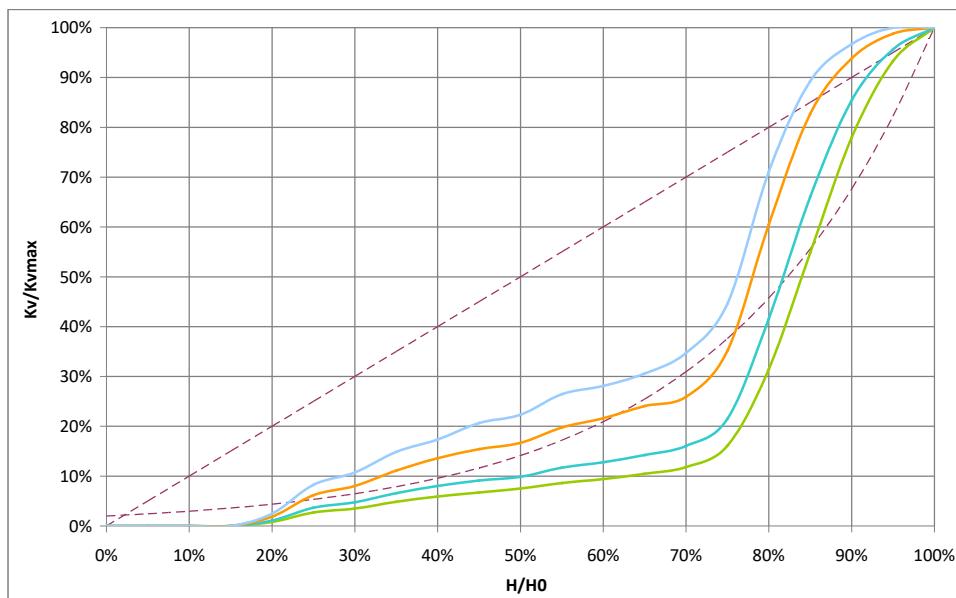

$K_{v\max}$  = valve flow factor at lift =  $H_0$

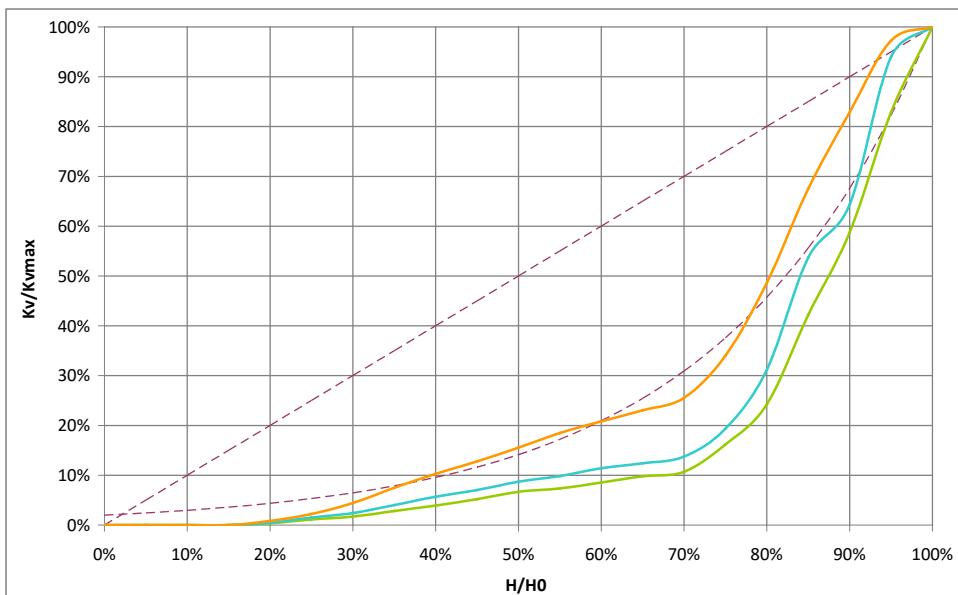

Thus,  $H/H_0$  and  $K_v/K_{v\max}$  ratios state respectively the opening percentage of the control valve and the flow rate percentage with respect to the maximum one set by the presetting knob.

In the next pages, control curves for each valve model are shown.

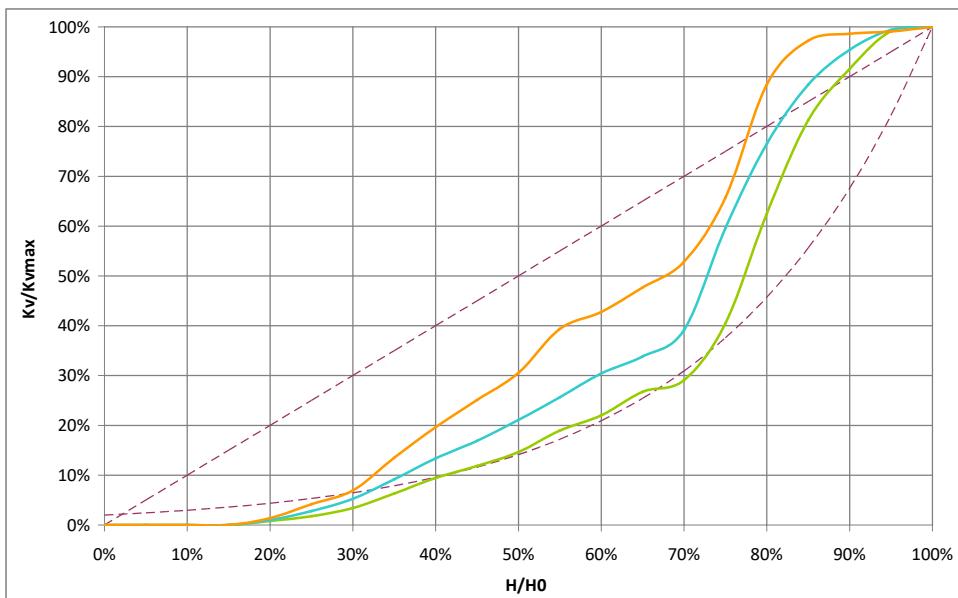

All valves control characteristic have been tested and plotted according to VDI/VDE 2173 guidelines; valves were driven by following actuators:

- VA7482 0-10V actuator
- SN08CC 0-10V actuator
- M94F2 0-10V actuator - Eq mode and Linear mode

## Installation and maintenance

Before filling the terminal unit system with water, make sure main pipeline has been flushed and most of dirt and debris have been flushed away. Always comply with local or applicable flushing, however, in order to get the longest life and the best performance from a PICV, Pettinaroli does not accept any liability for improper or wrong use of this product.

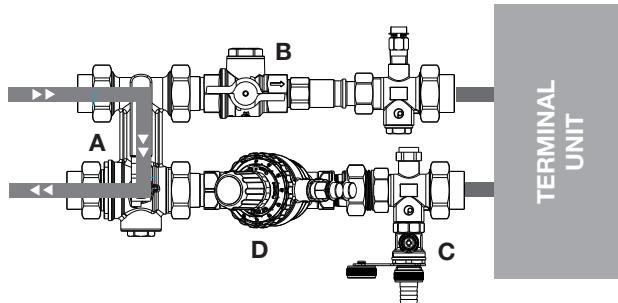

Always protect the pressure regulator by using strainers upstream of the valve and, in any case, make sure water quality complies with UNI 8065 standards ( $Fe < 0.5 \text{ mg/kg}$  and  $Cu < 0.1 \text{ mg/Kg}$ ).

Furthermore, maximum iron oxide in the water passing through control valve (PICV) should not exceed 25 mg/Kg (25 ppm).

To ensure the main pipework is cleaned appropriately, flushing by-passes should be used without flushing through the pressure regulator of the PICV thereby preventing debris that might clog the valve.

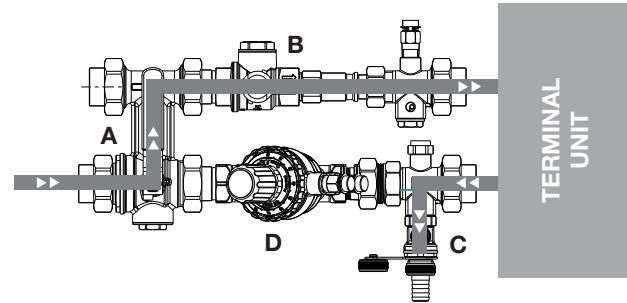

Here is an example, explaining the safest installation arrangement and filling/flushing methods:

**Flushing of main pipe line**

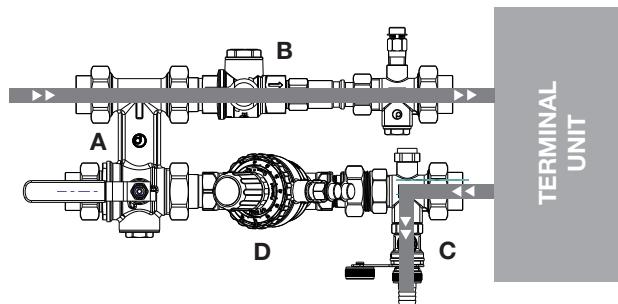

A: Bypass mode B: Closed C: Closed D: Open

**Reverse back flushing**

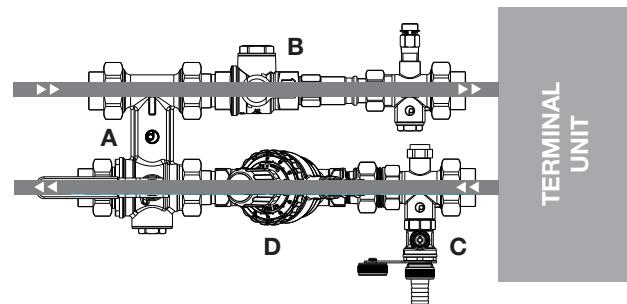

A: Bypass mode B: Open C: Open D: Closed

**Direct back flushing**

A: Normal mode B: Open C: Open D: Closed

**Ready for commissioning**

A: Normal mode B: Open C: Closed D: Open

# Installation and maintenance - 91 / 91X / 91-1 EvoPICV

## 1. Use conditions

The valve has to be mounted with the arrow in the direction of the flow. Mounting it in the wrong direction may damage the system and the valve itself.  
If flow reversal is possible, a non-return valve should be mounted.  
Minimum differential pressure above which the valve begins to exercise its regulating effect:

	91VL 1/2"	91L 1/2"	91H 1/2"	91L 3/4"	91H 3/4"	91H 1"
Start-up ΔP	20 kPa 0,20 bar	25 kPa 0,25 bar	35 kPa 0,35 bar	30 kPa 0,30 bar	35 kPa 0,35 bar	35 kPa 0,35 bar

Rounded values. At 100% preset. See also pages 10-11

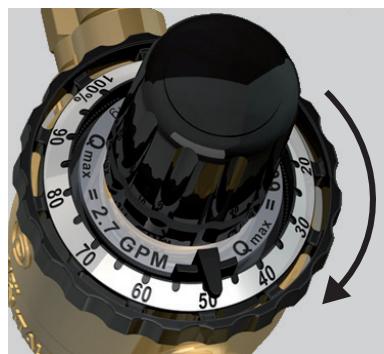

## 2. Flow preset

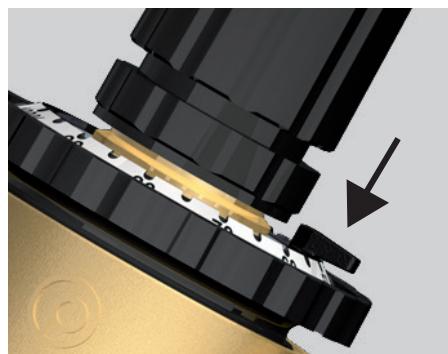

To set the selected flow, follow these steps:

Lift the lock pin to unlock the selector

Turn the selector to the target position

Press the lock pin to lock the selector in the final position

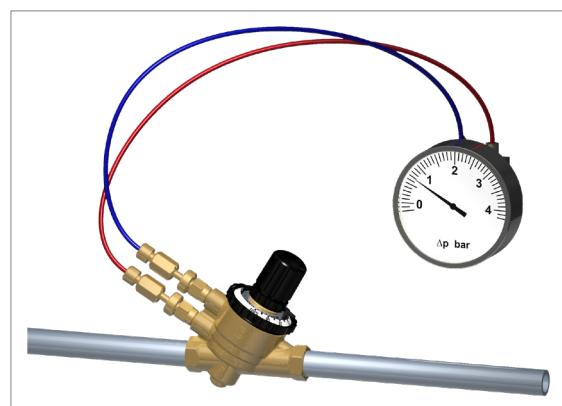

**Selector can be adjusted also with the mounted actuator. Patented (EP2488994-B1 and US8985140-B2).**

## 3. Operating control

It is necessary to be sure that the valve is actually working in the operating range. In order to verify it, just measure the differential pressure across the valve, as shown in the picture.

If the measured differential pressure is higher than the start-up pressure, the valve is actually keeping the flow constant at the set value.

This paragraph does not apply to 91X series. We suggest to use Fratelli Pettinaroli devices MDP and MDPS.

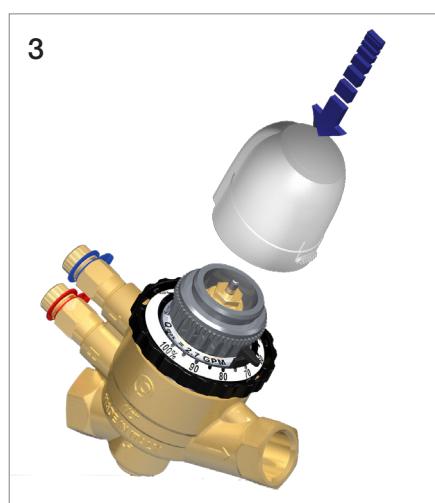

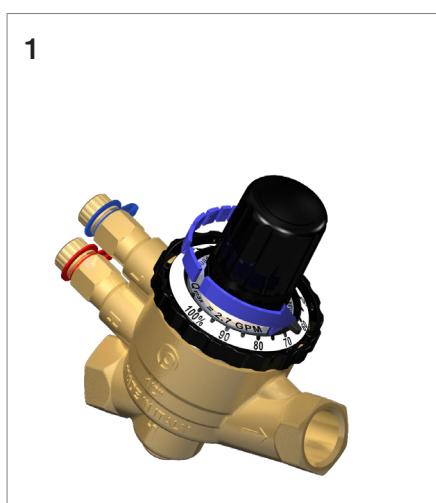

## 4. Maintenance and cleaning

During valve cleaning operations, use a damp cloth. DO NOT use any detergent or chemical product that may seriously damage or compromise the proper functioning and the reliability of the valve.

## 5. Actuator assembly

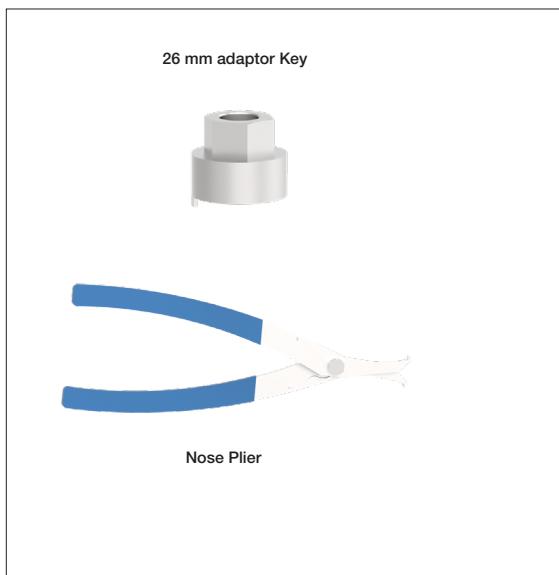

The valve can be equipped with a series of thermal-electric or electro-mechanical actuators, according to the requirements of the system. Actuators come along with an adaptor for proper mounting on the valve and for proper functioning of the whole device.

## 6. Replacement of the diaphragm of EvoPICV valve - 091SET maintenance kit

For further information please refer to instruction 208 - 091SET

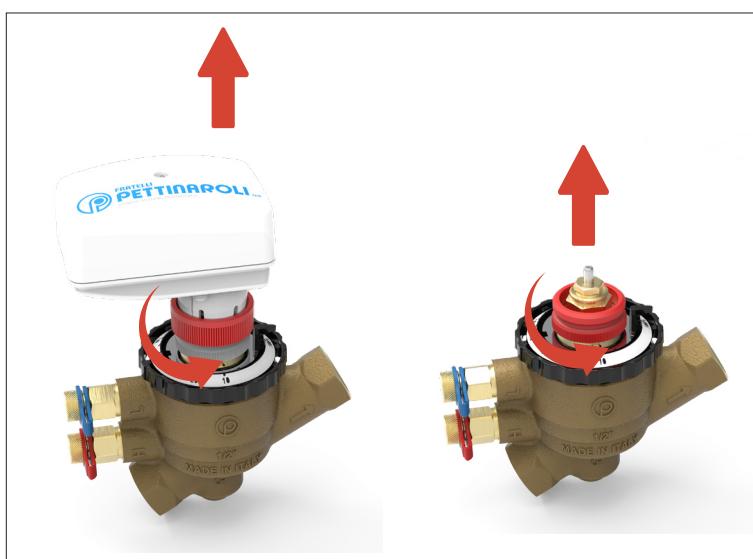

091SET maintenance kit

Step 1: remove completely the knob

Step 1a: remove the actuator and the adapter.

Step 2: using the 26mm adaptor key provided to remove the headwork. Align latches.

Step 3: using a 26mm spanner unscrew the headwork.

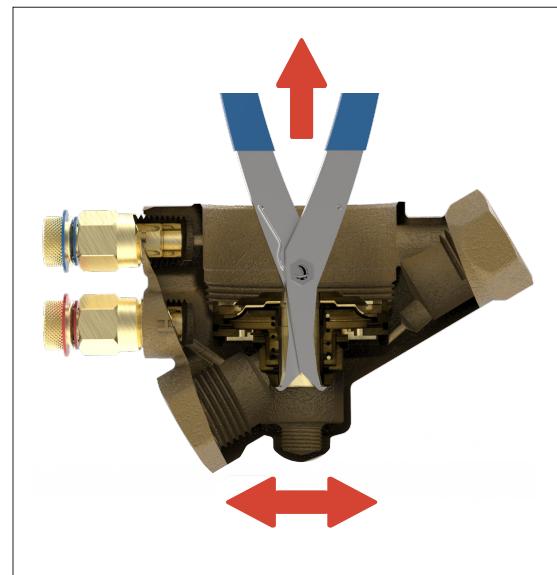

Step 4: remove the headwork.

Step 5: Insert the nose pliers through the center of the cartridge

Step 6: open the plier and pull the cartridge up out of the body

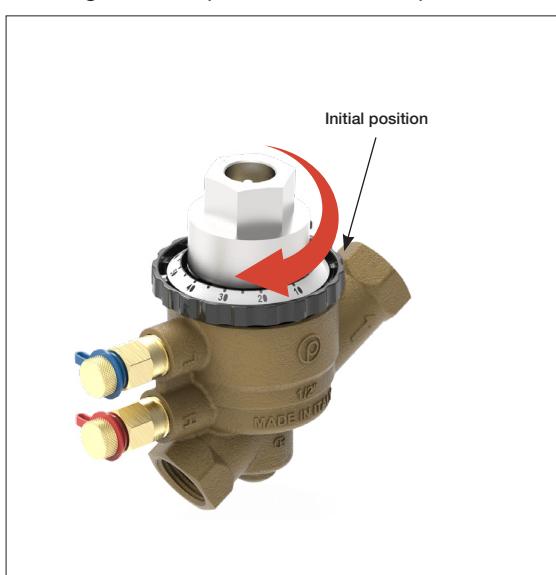

Step 7: Insert the new cartridge

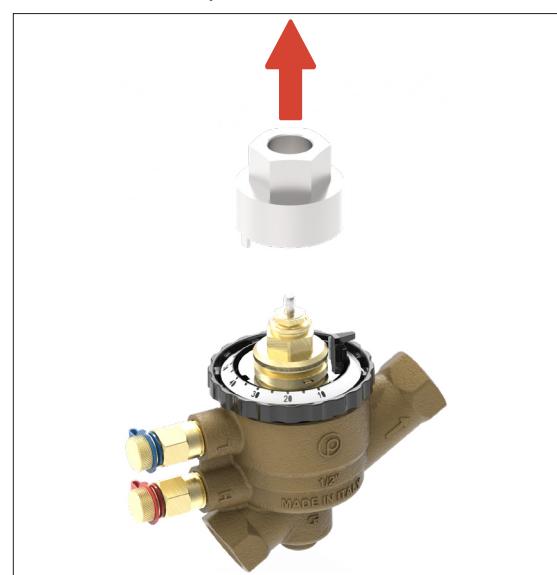

Step 8: Replace the headwork

Step 9: Screw the headwork with 15/20 Nm torque reaching the initial position of the lock pin

Step 10: remove the 26 mm adapter key and replace the actuator a adapter

# Installation and maintenance - 93 / 93-1 EvoPICV

## 1. Use conditions

The valve has to be mounted with the arrow in the direction of the flow. Mounting it in the wrong direction may damage the system and the valve itself.  
If flow reversal is possible, a non-return valve should be mounted.  
Minimum differential pressure above which the valve begins to exercise its regulating effect:

	93L ¾"	93H ¾"	93L 1"	93H 1"	93L 1 ¼"	93H 1 ¼"
<b>Start-up ΔP</b>	25 kPa 0,25 bar	30 kPa 0,30 bar	25 kPa 0,25 bar	30 kPa 0,30 bar	30 kPa 0,30 bar	35 kPa 0,35 bar

Rounded values. At 100% preset. See also pages 12

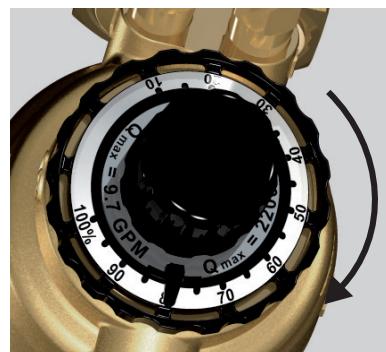

## 2. Flow preset

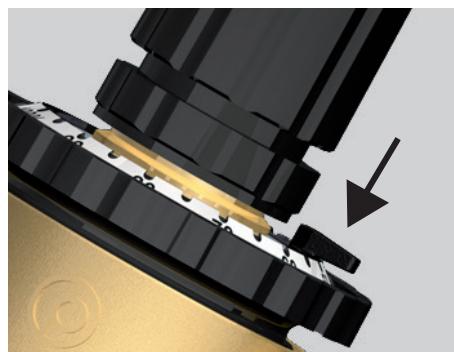

To set the selected flow, follow these steps:

Lift the lock pin to unlock the selector

Turn the selector to the target position

Press the lock pin to lock the selector in the final position

**Selector can be adjusted also with the mounted actuator. Patented (EP2488994-B1 and US8985140-B2).**

## 3. Operating control

It is necessary to be sure that the valve is actually working in the operating range. In order to verify it, just measure the differential pressure across the valve, as shown in the picture.

If the measured differential pressure is higher than the start-up pressure, the valve is actually keeping the flow constant at the set value. We suggest to use Fratelli Pettinaroli devices MDP and MDPS.

## 4. Maintenance and cleaning

During valve cleaning operations, use a damp cloth. DO NOT use any detergent or chemical product that may seriously damage or compromise the proper functioning and the reliability of the valve.

## 5. Diaphragm replacement and flushing

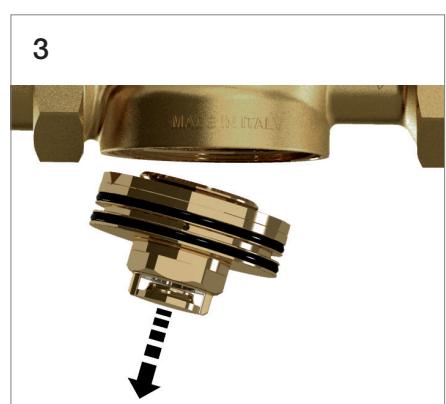

If the Diaphragm ( ΔP regulator ) needs to be replaced or when flushing the pipework during pre-commissioning, follow instructions below.

Unscrew bottom cap

Unscrew the Diaphragm using an hexagonal socket wrench

Manually pull out the Diaphragm. Wear gloves.

# Installation and maintenance - 83 EvoPICV

## 1. Use conditions

The valve has to be mounted with the arrow in the direction of the flow. Mounting it in the wrong direction may damage the system and the valve itself.  
If flow reversal is possible, a non-return valve should be mounted.  
Minimum differential pressure above which the valve begins to exercise its regulating effect:

	83HPR1 1 1/4"	83LPR1 1 1/2"	83HPR1 1 1/2"	83VLPR1 2"	83LPR1 2"	83HPR1 2"
Start-up ΔP	30 kPa 0,30 bar	30 kPa 0,30 bar	35 kPa 0,35 bar	40 kPa 0,40 bar	35 kPa 0,35 bar	35 kPa 0,35 bar

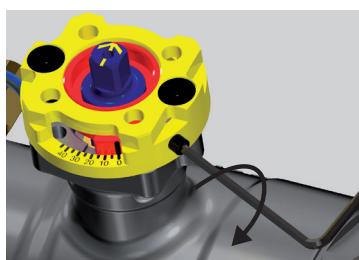

Rounded values. At 100% preset. See also pages 13-14

## 2. Flow preset

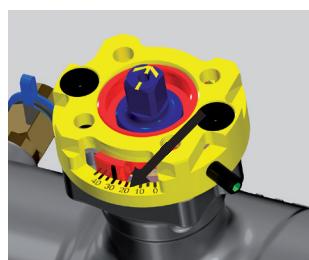

To set the selected flow, follow these steps:

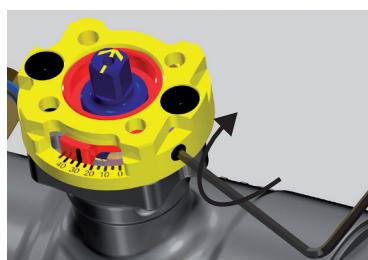

Close the valve

Release locking device

Set maximum flow rate

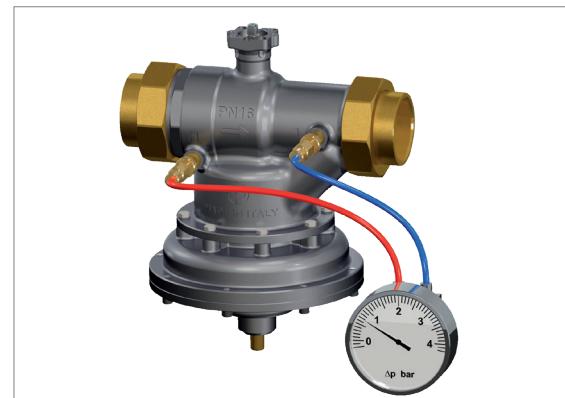

Lock again and re-open the valve.  
Don't overtighten. Could seriously damage the device.  
Torque 2÷3 Nm

## 3. Operating control

It is necessary to be sure that the valve is actually working in the operating range. In order to verify it, just measure the differential pressure across the valve, as shown in the picture.

If the measured differential pressure is higher than the start-up pressure, the valve is actually keeping the flow constant at the set value. We suggest to use Fratelli Pettinaroli devices MDP and MDPS.

## 4. Maintenance and cleaning

During valve cleaning operations, use a damp cloth. DO NOT use any detergent or chemical product that may seriously damage or compromise the proper functioning and the reliability of the valve.

## 5. Flushing and shut off

Flushing can be made through the valve by turning the valve 180°. The differential pressure reducer is now inhibited and no flow limitation occurs.

Remember to restore the valve in its working position after flushing.

The valve can be closed through the cartridge, should there be the need to do so, by using a 6 mm allen key.

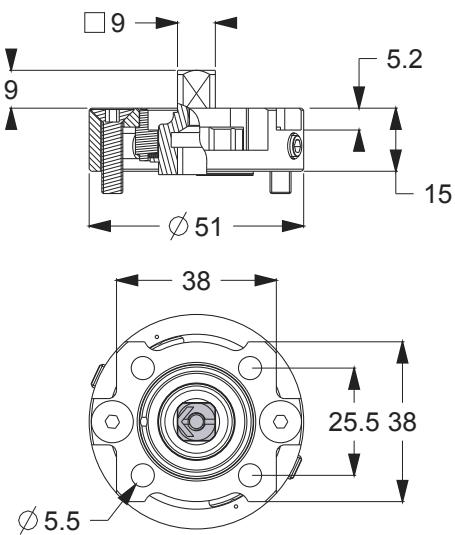

In normal working conditions this shut off device must be fully open.

## 6. Actuator assembly

The valve can be equipped with electro-mechanical actuators, according to the requirements of the system.  
The mounting pad is made according to ISO 9210 F04.

Presetting device and mounting pad

# Installation and maintenance - 94F EvoPICV 2" - 10"

## 1. Use conditions

The valve has to be mounted with the arrow in the direction of the flow. Mounting it in the wrong direction may damage the system and the valve itself.  
If flow reversal is possible, a non-return valve should be mounted.  
Minimum differential pressure above which the valve begins to exercise its regulating effect:

	94FH 2"	94FL 2 1/2"	94FH 2 1/2"	94FL 3"	94FL 4"
Start-up ΔP	40 kPa 0,40 bar	40 kPa 0,40 bar	30 kPa 0,30 bar	30 kPa 0,30 bar	30 kPa 0,30 bar

	94FL 5"	94FH 5"	94FL 6"	94FH 6"
Start-up ΔP	35 kPa 0,35 bar	35 kPa 0,35 bar	35 kPa 0,35 bar	50 kPa 0,50 bar

	94FL 8"	94FH 8"	94FL 10"	94FH 10"
Start-up ΔP	40 kPa 0,40 bar	60 kPa 0,60 bar	40 kPa 0,40 bar	65 kPa 0,65 bar

Rounded values. At 100% preset. See also pages 14-17

## 2. Flow preset

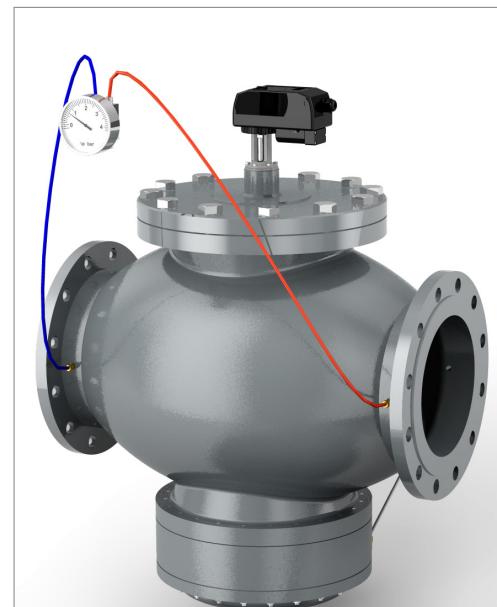

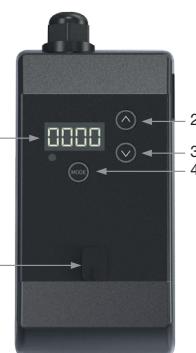

The 94F is set up using the Smart Actuator:

When first powered 'GO 0' is displayed on the LCD. Then wait for '0' to appear. Pressing the 'MODE' button for 2 seconds or longer turns to setting mode. You can then choose the detail indication that's suitable for your on-site installations. When in 'set' mode, press the MODE button again and you can choose another set mode (set 1 - set 14).

- SET1 - Selecting input indication in direct internal control mode
- SET2 - Selecting an input signal
- SET3 - Min. flow setting
- SET4 - Max. flow setting
- SET5 - Selecting parameters display mode during operation
- SET6 - Rotation angle compensation
- SET7 - Flow offset compensation
- SET8 - Power failure mode (not available)
- SET9 - Flow rate units selection
- SET10 - Control curve selection (LIN - EQ)
- SET11 - Min voltage signal in PID control mode
- SET12 - Max voltage signal in PID control mode
- SET13 - Actuator rotation speed
- SET14 - Feedback signal selection

Actuator M94F2

- |   |                 |
|---|-----------------|
| 1 | Display         |
| 2 | Up button       |
| 3 | Mode button     |
| 4 | Down button     |
| 5 | Manual override |

## 3. Operating control

It is necessary to be sure that the valve is actually working in the operating range. In order to verify it, just measure the differential pressure across the valve, as shown in the picture.

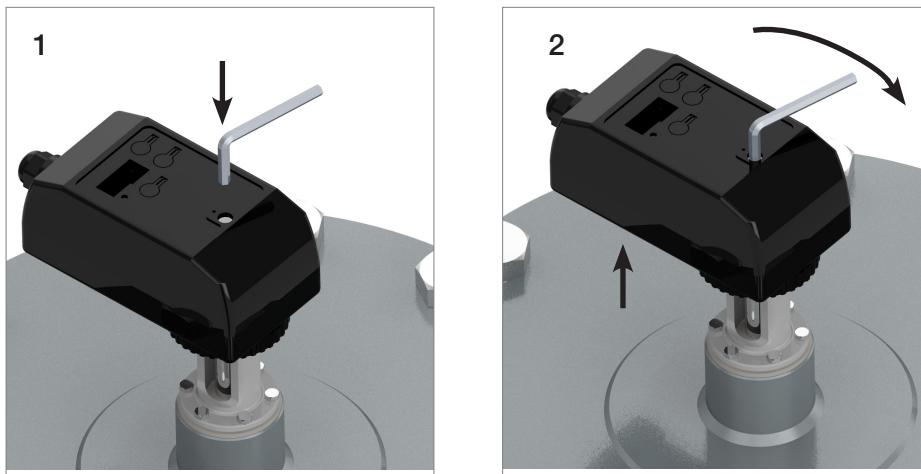

If the measured differential pressure is higher than the start-up pressure, the valve is actually keeping the flow constant at the set value. We suggest to use Fratelli Pettinaroli devices MDP and MDPS.

## 4. Maintenance and cleaning

During valve cleaning operations, use a damp cloth. DO NOT use any detergent or chemical product that may seriously damage or compromise the proper functioning and the reliability of the valve.

## 5. Manual override

1. Open the rubber cover on the actuator and insert the 6mm Allen key.
2. Turn the key keeping the released button pushed under the actuator.

## 6. Actuator fitting

1. Insert the three pins in specific buttonholes on the fixing plate
2. Turn the fixing ring

### Setting of parameter SET 4: FLOW RATE PRESETTING

The presetting flow rate of valve 94F can be set through the parameter SET 4 of the M94F2 actuator: the parameter should set between the max and min presetting flow rate of the valve. SET 3 should be left at 0.

Valve	94FH 2"	94FL 2 1/2"	94FH 2 1/2"	94FL 3"	94FL 4"	94FL 5"	94FH 5"	94FL 6"	94FH 6"
<b>Max presetting flow rate [m3/h]</b>	20	20	30	30	55	90	120	90	150
<b>Min presetting flow rate [m3/h]</b>	4	4	6	6	16.5	18	12	18	15
<b>Model code</b>	F-50	F-64	F-65	F-80	F-100	F-125	F-126	F-150	F-151

Valve	94FL 8"	94FH 8"	94FL 10"	94FH 10"
<b>Max presetting flow rate [m3/h]</b>	200	300	300	500
<b>Min presetting flow rate [m3/h]</b>	60	90	60	150
<b>Model code</b>	F-200	F-201	F-250	F-251

### Setting procedure

Other parameters can be set, if necessary, without a preferential path.

## 7. Parameters of actuator

The table below explains all the parameters that are configurable on M94F2.

	<b>Display indication</b>	<b>Meaning</b>	<b>Operating</b>
<b>SET 1</b>	<i>P<small>Erc</small></i>	Input internal control in %	Selection with UP/DOWN buttons and confirmation with MODE button
	<i>FL<small>o</small></i> (default)	Input internal control in flow rate	
<b>SET 2</b>	<i>0-10</i>	Voltage control signal	Control with voltage signal
	<i>2-10</i> (default)	Voltage control signal	Control with voltage signal
	<i>0-20</i>	Current control signal	Control with current signal
	<i>4-20</i>	Current control signal	Control with current signal
	<i>on-F</i>	ON/OFF	24 V: open; 0 V: close;
	<i>3-FL</i>	3 points floating	opening giving white wire 24 V closing giving green wire 24 V
	<i>rT</i>	Remote control	<b>Not available</b>
	<i>P-05</i>	PWM 5 s	PWM (0.1 – 5 s)
<b>SET 3</b>	<i>P-25</i>	PWM 25 s	PWM (0.1 – 25 s)
	<i>InE</i>	Internal input	Flow rate set by on board display and buttons. Push MODE, wait until "Set" is replaced by flow rate indication (or flow rate %, depending on SET 1), set the flow rate with UP/DOWN buttons and confirm with MODE.
<b>SET 4</b>	Flow rate on display	Min flow rate selection (default: 0)	Selection with UP/DOWN buttons and confirmation with MODE button
<b>SET 5</b>	Flow rate on display	Max flow rate selection (default: depending on model)	Selection with UP/DOWN buttons and confirmation with MODE button
<b>SET 5</b>	<i>St-P</i>	Set flow rate in "%"	Selection with UP/DOWN buttons and confirmation with MODE button
	<i>St-F</i>	Set flow rate in "flow rate"	
	<i>Fd-P</i>	Current flow rate in "%"	Display option during operation: St allows to see the flow rate value required by the controller; Fd allows to see the current flow rate value given by the valve (the progressive change of flow rate values is displayed during valve stem motion)
	<i>Fd-F</i> (default)	Current flow rate in "flow rate"	
<b>SET 6*</b>	Value on display	Rotation angle compensation	Selection with UP/DOWN buttons and confirmation with MODE button
<b>SET 7</b>	Value on display	% flow rate offset (default: 0)	Selezione con tasti SU/GIÙ e conferma con tasto MODE.
<b>SET 8</b>	<i>oPEn</i>	Valve open at power failure	Selection Fail-CLOSE or Fail-OPEN option. Additional battery M94FB needed.
	<i>CLoS</i> (default)	Valve close at power failure	
<b>SET 9</b>	<i>LIE</i> (default)	Unit SI (m <sup>3</sup> /h)	Selection with UP/DOWN buttons and confirmation with MODE button
	<i>GAL</i>	Unit GPM (gal/min)	
<b>SET 10</b>	<i>LIn</i> (default)	Linear control curve	Selection with UP/DOWN buttons and confirmation with MODE button
	<i>EPEr</i>	Equal percentage control curve	
<b>SET 11*</b>	Value on display	Min voltage control signal (signal noise)	Selection min voltage control value with UP/DOWN buttons and confirmation with MODE button
<b>SET 12*</b>	Value on display	Max voltage control signal (signal noise)	Selection min voltage control value with UP/DOWN buttons and confirmation with MODE button
<b>SET 13</b>	<i>PE15</i> (default)	Actuator rotation speed 1.5 RPM	Selection of actuator rotation speed with UP/DOWN buttons and confirmation with MODE button
	<i>PE01</i>	Actuator rotation speed 1 RPM	
	<i>Ruto</i>	Actuator rotation speed automatic	
<b>SET 14</b>	<i>0-10</i>	Voltage feedback signal	Selection of feedback signal type with UP/DOWN buttons and confirmation with MODE button
	<i>2-10</i> (default)	Voltage feedback signal	
	<i>0-20</i>	Current feedback signal	
	<i>4-20</i>	Current feedback signal

## Electromotive actuators

### 1. Art. VA7481

24V Vac floating model

Technical features	
<b>Supply voltage</b>	24 Vac $\pm 15\%$ , 50...60 Hz
<b>Absorbed power</b>	1,5 W / 2,5VA
<b>Max fluid temperature</b>	95 °C
<b>Max ambient temperature</b>	0 - 50 °C
<b>Degree of protection</b>	IP 43
<b>Actuating force</b>	120 N +30% -20%
<b>Max mechanical stroke</b>	6,3 mm
<b>Travelling time</b>	8 sec/mm

Mounting positions: any positions between vertical and horizontal. Upside down mounting (actuator underneath the valve) must be avoided.

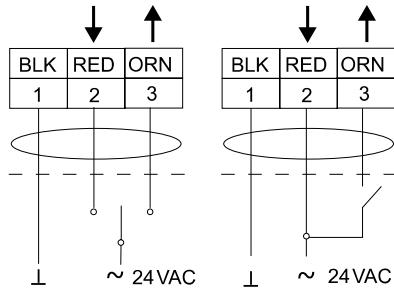

For proper installation of VA7481 - 24V electromotive actuator, the right adapting ring has to be defined (and ordered separately), referring to codes below:

- OA7010 for EVOPICV series 91 valves
- OA748X for EVOPICV series 93 valves

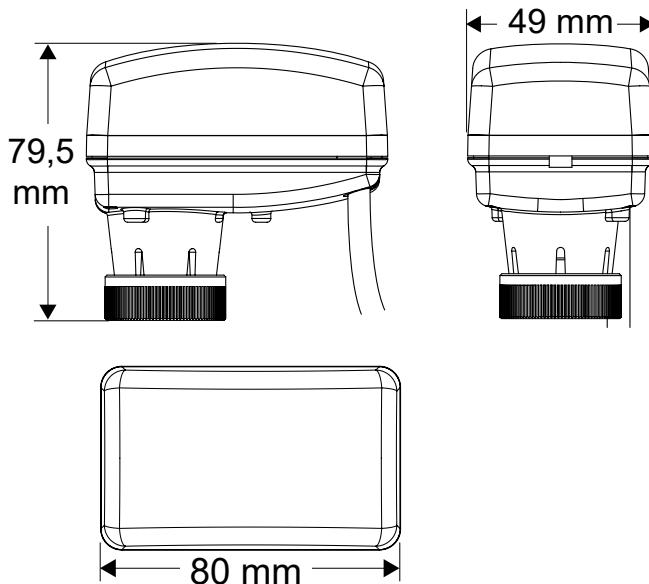

### Operating status indication

### Connections

OFF		No power supply
GREEN BLINKING		Moving to position
GREEN BLINKING		End stroke confirmation
GREEN STEADY ON		End Stroke reached

### Overall dimensions

**2. Art. VA7481**

230V Vac floating model

Technical features	
<b>Supply voltage</b>	230 Vac ± 10%, 50...60 Hz
<b>Absorbed power</b>	2,2 W / 6,5VA
<b>Max fluid temperature</b>	95 °C
<b>Max ambient temperature</b>	0 - 50 °C
<b>Degree of protection</b>	IP 43
<b>Actuating force</b>	120 N +30% -20%
<b>Max mechanical stroke</b>	6,3 mm
<b>Travelling time</b>	8 sec/mm

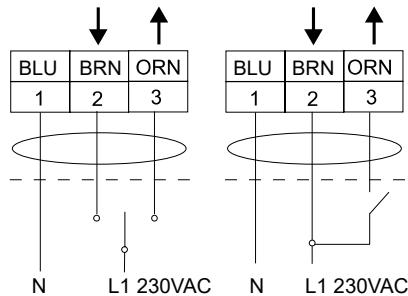

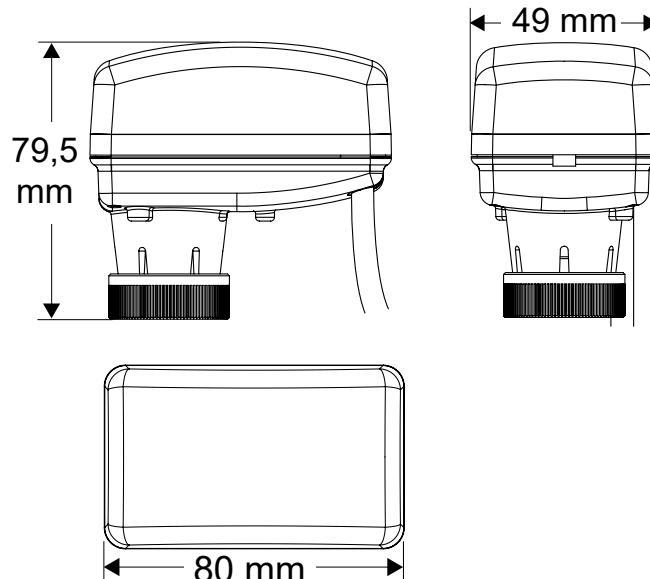

Mounting positions: any positions between vertical and horizontal. Upside down mounting (actuator underneath the valve) must be avoided.

For proper installation of VA7481 - 230V electromotive actuator, the right adapting ring has to be defined (and ordered separately), referring to codes below:

- .. 0A7010 for EVOPICV series 91 valves
- 0A748X for EVOPICV series 93 valves

**Operating status indication**

OFF		No power supply
GREEN BLINKING		Moving to position
GREEN BLINKING		End stroke confirmation

**Connections****Overall dimensions**

### 3. Art. VA7482

24 Vac/Vdc proportional model

Technical features	
<b>Supply voltage</b>	24 Vac/Vdc $\pm$ 15%, 50...60 Hz
<b>Absorbed power</b>	1,5 W / 2,5 VA
<b>Input Impedance</b>	Voltage > 100 k $\Omega$ - Current 500 $\Omega$
<b>Max fluid temperature</b>	95 °C
<b>Max ambient temperature</b>	0 - 50 °C
<b>Degree of protection</b>	IP 43
<b>Actuating force</b>	120 N +30% -20%
<b>Max mechanical stroke</b>	6,3 mm / 3,2 mm
<b>Travelling time</b>	8 sec/mm

Mounting positions: any positions between vertical and horizontal. Upside down mounting (actuator underneath the valve) must be avoided.

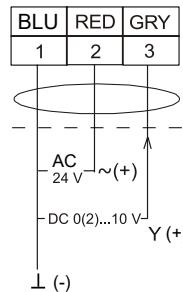

For proper installation of VA7482 - 24V electromotive actuator, the right adapting ring has to be defined (and ordered separately), referring to codes below:

- OA7010 for EVOPICV series 91 valves
- OA748X for EVOPICV series 93 valves

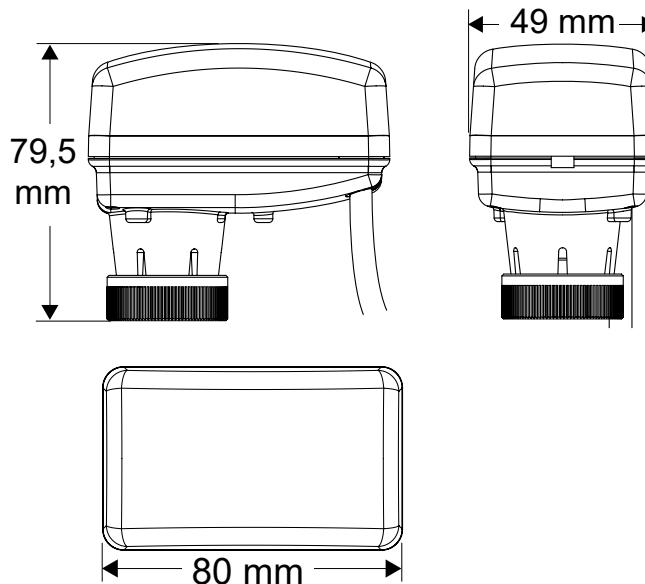

#### Operating status indication

OFF		No power supply
GREEN BLINKING		Moving to position
GREEN BLINKING		End stroke confirmation
GREEN STEADY ON		Position reached
RED BLINKING		Cycle
RED STEADY ON		4/20 mA or 2/10 Vdc signal lost

#### Connections

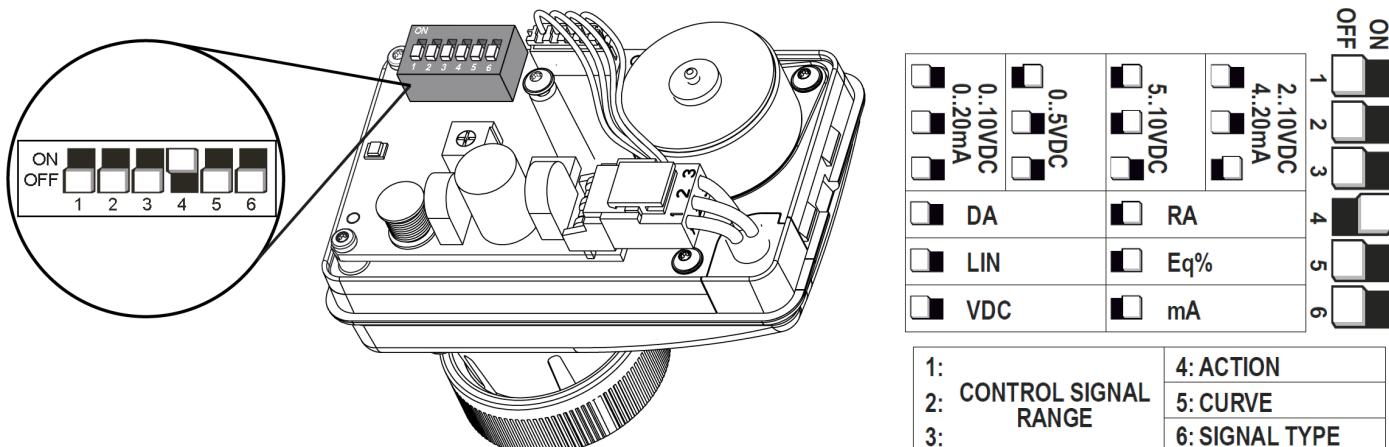

#### Overall dimensions

Dip switch settings for Proportional model only (VA7482)

All the proportional models have 6 dip switches which allow the user to field configure the actuator.

The actuator is factory released with all the dip switches in OFF position expect dip switch n. 4 which is ON.

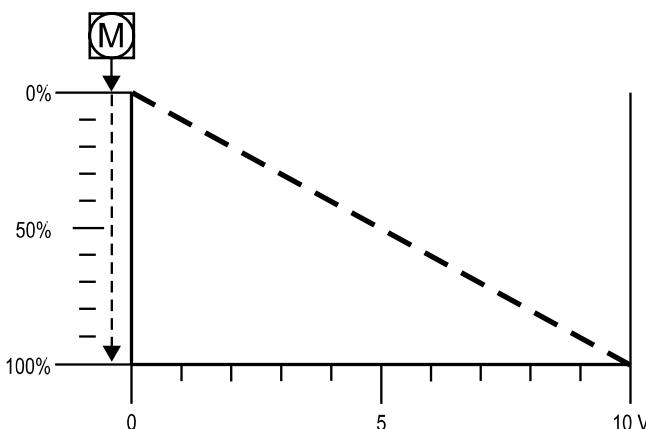

#### Dip Switch 1 – 2 – 3 – 6

The dip switch 1-2-3 allows the user to change the analogue input ranges. To switch from voltage analog input to current analog input the dip switch 6 has to be set accordingly.

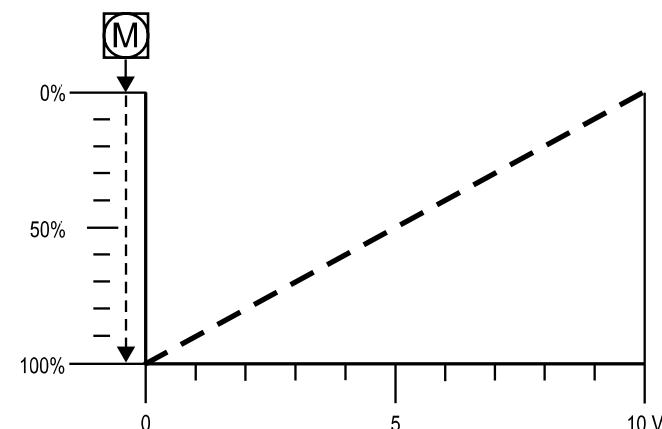

#### Dip Switch4

The dip switch 4 allows the user to change the action of the actuator in relation of the analog input. Be aware the **EvoPICV** valve is normally open. Select the action according to the chosen BSM.

The dip switch 4 OFF (Direct Acting – DA)

When the signal increases the actuator stem extends.

The dip switch 4 ON (Reversing Acting – RA) - Default

When the signal increases the actuator stem retracts.

#### Dip Switch 5

The dip switch 5 allows the user to change the control characteristic of the actuator in order to obtain a combination of valve and actuator linear or almost equal percentage.

The dip switch 5 OFF (Linear)

The dip switch 5 ON (almost EqualPercentage)

#### 4. VM060

Safe return electromotive linear actuator 24V

Technical features	
<b>Minimum Force</b>	120 Nm
<b>Power supply</b>	22 to 26 Vac or 22 to 26 Vdc
<b>Power consumption</b>	10VA peak, 6VA
<b>Electrical connection</b>	4-wire halogen free cable 0.8 mm <sup>2</sup> , 1 m long
<b>Control mode &amp; signal</b>	Analog, 0-10Vdc or 2-10Vdc 4-20mA with externally wired 500Ω resistor
<b>Feedback signal</b>	0-10Vdc or 2-10Vdc
<b>Running time</b>	18.5 sec/mm - 120 sec for 6.5mm
<b>Failsafe Running time</b>	9.2 sec/mm - 60 sec for 6.5mm
<b>Maximum stroke</b>	Up to 6.5 mm, self adjustable
<b>Direction</b>	Reversible, normally up position (EvoPICV open) or normally down position (EvoPICV close)
<b>Temperature range</b>	2°C to 50°C
<b>Humidity range</b>	5 to 95 % non condensing
<b>Stock temperature</b>	-30°C to 50°C
<b>Ingress protection</b>	IP54 equivalent to NEMA type 3R

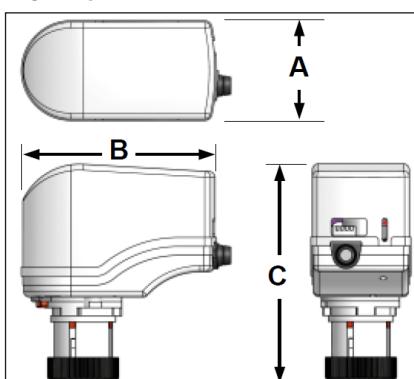

Information is referred to actuator fit onto **EvoPICV** 91 - 93.

Mounting positions: any positions between vertical and horizontal. Upside down mounting (actuator underneath the valve) must be avoided.

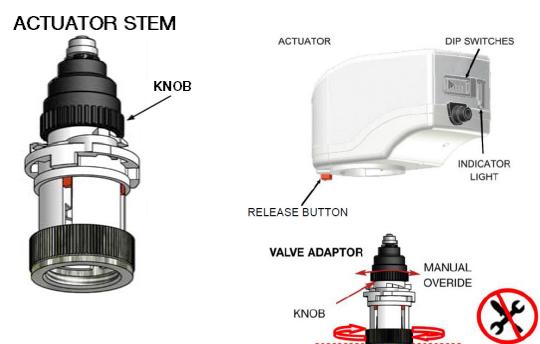

In order to correctly install the electromotive actuator VM060, the adaptor 76TE has to be tightened onto the control valve; the adaptor is included.

#### Overall dimensions

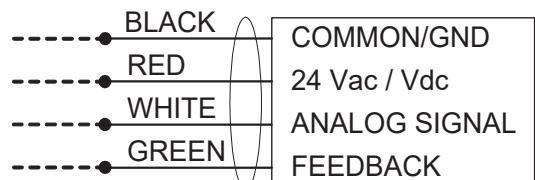

A = 53 mm  
B = 104 mm  
C = 107 mm

# Rotary actuators for 83 series

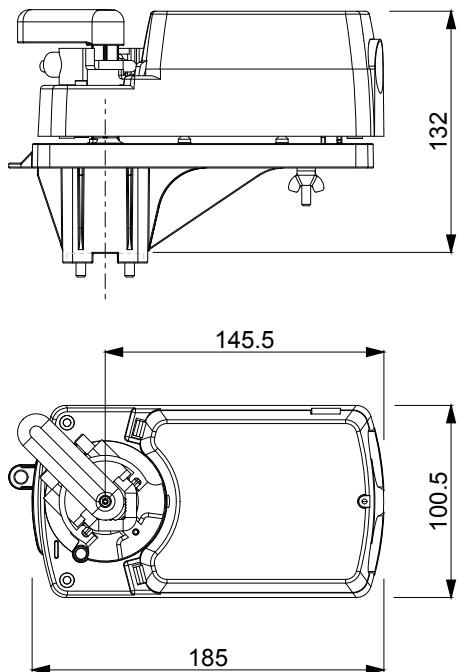

## 1. SN08 24V

3 point floating control signal

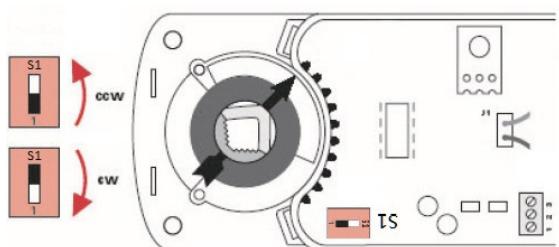

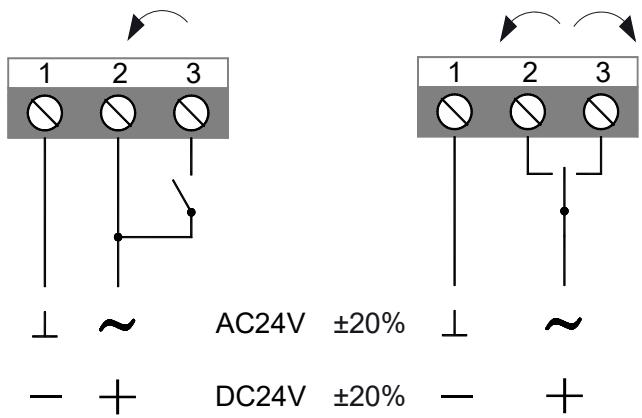

Technical features	
Operating torque	8 Nm Min.
Running time	31 s - 90°
Supply Voltage	24V AC/DC ±20% - 50/60Hz
Consumption	4.5 W - Stand-by 0.3 W
Control Signal	2 point and 3 point
Total rotation	0~90°
Angle limitation	5~85° (5° increment)
Life cycle	60,000 cycle
Protection Class	III
IP protection class	IP54
Temperature range	-20~+50°C
Humidity range	5~95% RH
Stock temperature	-40~+70°C
Certificate	CE

Overall dimensions

Connections

S1 OFF: see wiring

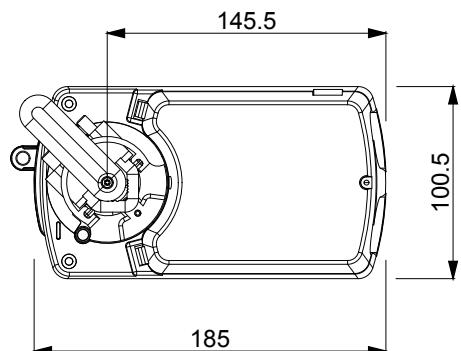

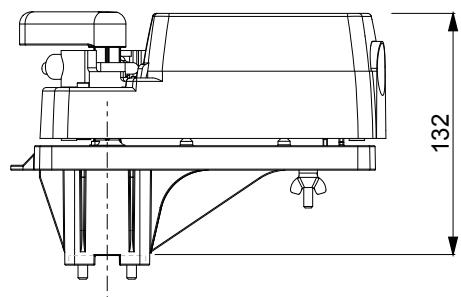

## 2. SN08 110/240V

3 point floating control signal

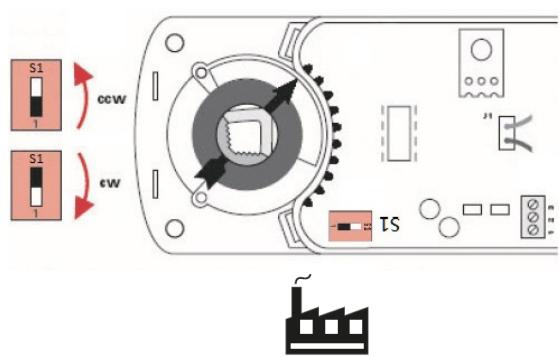

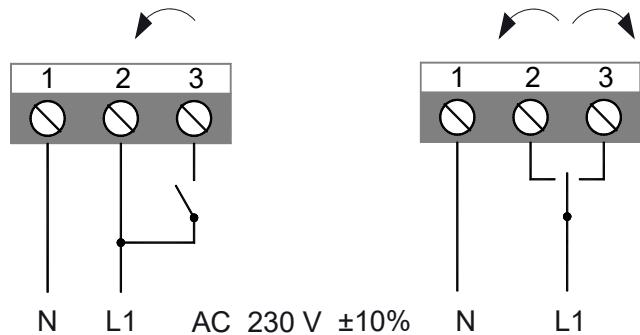

Technical features	
Operating torque	8 Nm Min.
Running time	31 s - 90°
Supply Voltage	110...230V AC ±10% - 50/60Hz
Consumption	4.5 W - Stand-by 0.5 W - 6.5 VA
Control Signal	2 point and 3 point
Total rotation	0~90°
Angle limitation	5~85° (5° increment)
Life cycle	60,000 cycle
Protection Class	II
IP protection class	IP54
Temperature range	-20~+50°C
Humidity range	5~95% RH
Stock temperature	-40~+70°C
Certificate	CE

### Overall dimensions

### Connections

S1 OFF: see wiring

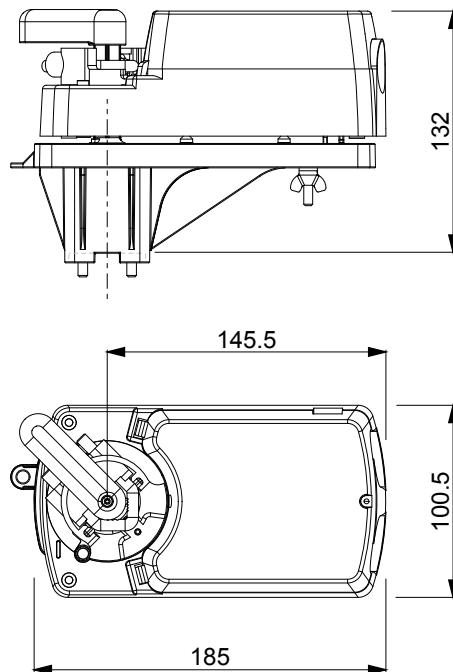

### 3. SN08CC 24V

Proportional control signal

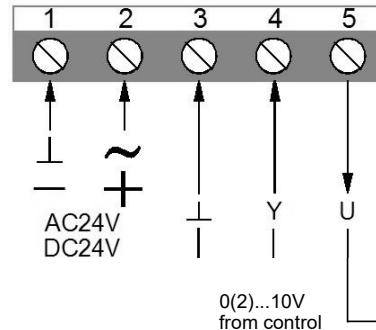

Technical features	
Operating torque	8 Nm Min.
Running time	31 s - 90°
Supply Voltage	24V AC/DC ±20% - 50/60Hz
Consumption	4.5 W - Stand-by 0.5 W
Control Signal	0(2)-10 VDC 0(4)-20 mA
Total rotation	0~90°
Angle limitation	5~85° (5° increment)
Life cycle	60,000 cycle
Protection Class	II
IP protection class	IP54
Temperature range	-20~+50°C
Humidity range	5~95% RH
Stock temperature	-40~+70°C
Certificate	CE

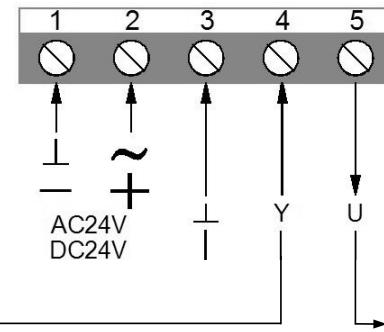

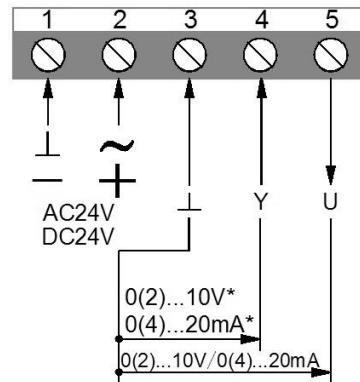

#### Overall dimensions

#### Master/slave control

#### Connections

#### DIP-Switch setting

Dip-Switch 1: feedback signal type	Dip-Switch 2: control signal range	Dip-Switch 3: control signal type	Dip-Switch 4: rotation direction	Factory setting
ON	ON	ON	ON	ON
OFF: voltage signal 0(2)-10 V	OFF: 0-10 V o 0-20 mA	OFF: voltage signal 0(2)-10 V	OFF: signal increases, counter clockwise rot.	Input: 0-10V Feedback: 0-10V While the signal increases, the actuator rotates clockwise
ON	ON	ON	ON	ON: current signal 0(4)-20 mA
ON: current signal 0(4)-20 mA	ON: 2-10 V o 4-20 mA	ON: current signal 0(4)-20 mA	ON: signal increases, clockwise rotation	ON: 2-10 V o 4-20 mA

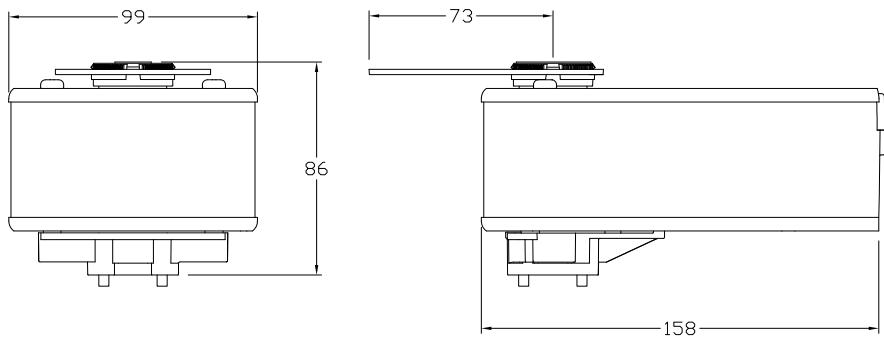

#### 4. VA9208 24V

ON/OFF control spring return

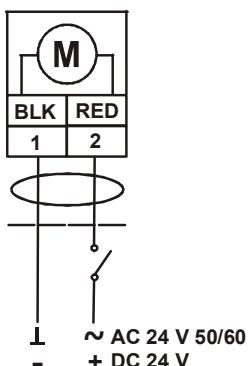

Technical features	
<b>Operating torque</b>	8 Nm power ON - 6÷8 power OFF
<b>Running time</b>	55÷71 s power ON - 13÷26 s power OFF
<b>Supply Voltage</b>	24V AC/DC - 50/60Hz
<b>Consumption</b>	6.1 VA - Stand-by 1.2 VA
<b>Control Signal</b>	ON/OFF
<b>Total rotation</b>	0 - 95°
<b>Life cycle</b>	60,000 cycle
<b>IP protection class</b>	IP54
<b>Temperature range</b>	-20 ÷ +60°C
<b>Humidity range</b>	5~90% RH
<b>Stock temperature</b>	-40 ÷ +85°C
<b>Certificate</b>	CE

#### Overall dimensions

#### Connections

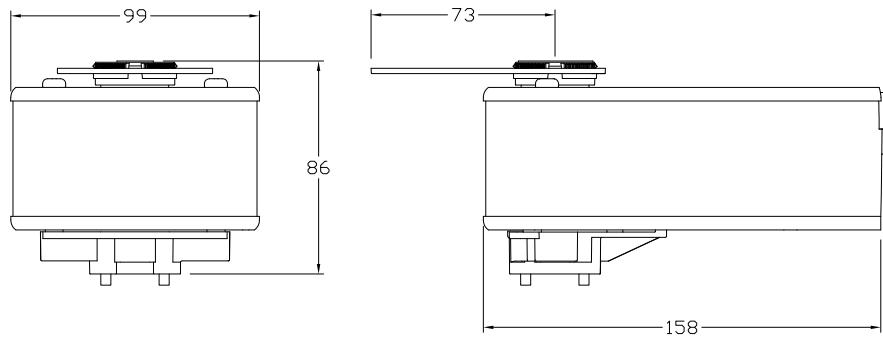

## 5. VA9208 230V

ON/OFF control spring return

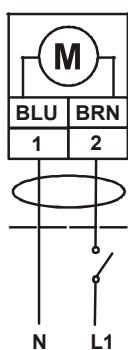

Technical features	
<b>Operating torque</b>	8 Nm power ON - 6÷8 power OFF
<b>Running time</b>	55÷71 s power ON - 13÷26 s power OFF
<b>Supply Voltage</b>	230V AC - 50/60Hz
<b>Consumption</b>	0.04 A - Stand-by 0.03 A
<b>Control Signal</b>	ON/OFF
<b>Total rotation</b>	0 - 95°
<b>Life cycle</b>	60,000 cycle
<b>IP protection class</b>	IP54
<b>Temperature range</b>	-20 ÷ +60°C
<b>Humidity range</b>	5~90% RH
<b>Stock temperature</b>	-40 ÷ +85°C
<b>Certificate</b>	CE

### Overall dimensions

### Connections

AC 230 V 50/60 Hz

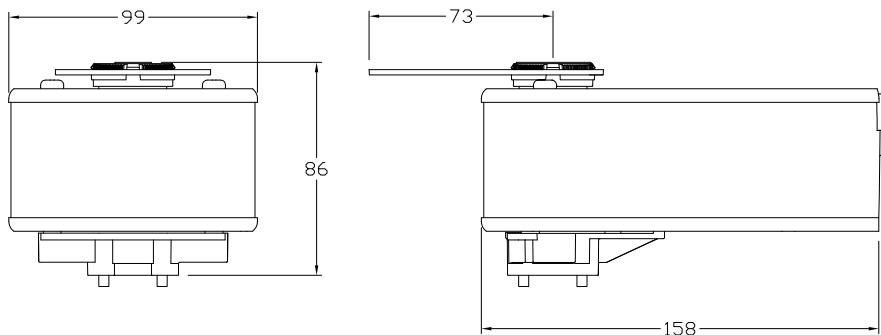

## 6. VA9208C 24V

Proportional control spring return

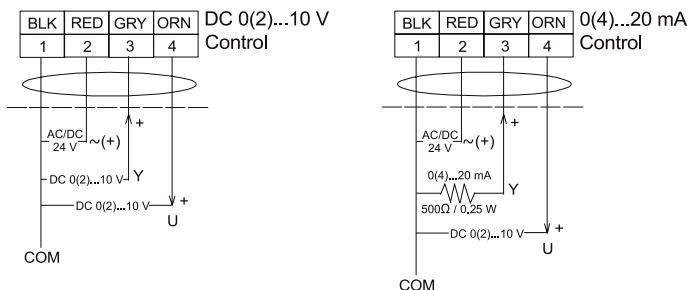

Technical features	
<b>Operating torque</b>	8 Nm
<b>Running time</b>	150 s standard ; 90 s calibration/override 17 ÷ 25 s power OFF
<b>Supply Voltage</b>	24V AC/DC - 50/60Hz
<b>Consumption</b>	7.9 VA - Stand-by 5.5 VA
<b>Control Signal</b>	0-10 V DC
<b>Total rotation</b>	0 - 95°
<b>Life cycle</b>	60,000 cycle
<b>IP protection class</b>	IP54
<b>Temperature range</b>	-40 ÷ +60°C
<b>Humidity range</b>	5~90% RH
<b>Stock temperature</b>	-40 ÷ +85°C
<b>Certificate</b>	CE

## M94F2 - SMART actuators for 94F series 2" - 10"

Flow rate can be easily set from the on-board user interface.  
Compatible with most used control signals:

Analogue (current or voltage control)  
PWM  
ON/OFF  
3 points floating

Position feedback signal, for a total remote management.  
Manual override available.  
Safe Return function if battery M94FB is connected (optional).  
Easy fitting system.

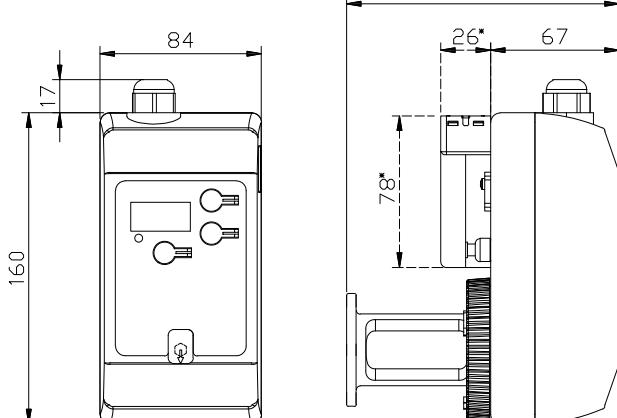

### Technical features

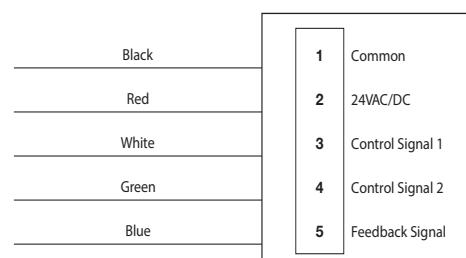

<b>Operating duration</b>	170 sec. ( Full Open <-> Full Closed )
<b>Power supply</b>	24V AC/DC - 50/60Hz
<b>Power consuption</b>	1.8 W
<b>Emergency operation</b>	Manual override by means of an Allen key, access on the upper face of the actuator. Button release
<b>Control input</b>	PID Control 0(2)-10VDC PID Control 0(4) – 20mA ON/OFF Control mode 3 point floating PWM Control ( 0.1 ~ 5 sec/20ms or 25 sec/100ms depending on switch setting )
<b>Torque</b>	10 Nm max. Auto limitated at 7 Nm.
<b>Position feedback</b>	0(4)-20mA or 0(2)-10VDC, selectable
<b>Ambient temp.</b>	-20°C ~ 65°C
<b>Wire</b>	18AWG
<b>Cover material</b>	Steel + Plastic
<b>Protection class</b>	II - IP54
<b>Certificate</b>	CE - UL
<b>Lifetime</b>	10.000 hours (tested 50.000 cycles)
<b>Optional battery</b>	For Fail-safe function: rechargeable Lithium-ion battery, 2 x NCR 18650 - 2600 mAh
